

New Hampshire SAFE-ITR 60-Day Performance Measures 07/01/23 through 08/31/23

Number of SAKs that are in the possession of the applicant agency at the beginning of the award period: 0

The NH DOJ issues SAEKs to hospitals, now with kit tracking labels affixed to them, but does not possess used SAEKs. SAEKs are held as evidence at individual police departments around the State until and after lab submission.

Number of SAKs inventoried during the reporting period:

Utilizing the new tracking system, 102 kits were submitted to the NH State Police Forensic Lab (NHSPFL) for analysis during this 60-day reporting period. An additional 9 anonymous kits were submitted to the Lab but during this 60-day reporting period will not be analyzed unless/until a victim comes forward to law enforcement and authorizes analysis.

Total 111 kits submitted.

Number of SAKs that do not require testing.

The NH State Police Forensic Lab determines which kits are not eligible for testing. The Lab provides reports to the law enforcement agencies submitting the kit, therefore the NH DOJ and the SAFE-ITR Coordinator do not have access to individual lab reports or data generated as a result of this Initiative.

Percentage of unsubmitted SAKs identified as needing forensic testing:

This is determined by the NH State Police Forensic Lab pursuant to their protocols and standards. The Lab provides reports to the law enforcement agencies submitting the kit. SAFE-ITR related lab reports and CODIS hit reports also go to the respective County Attorney Office. The NH DOJ and the SAFE-ITR Coordinator do not have access to individual lab reports or data generated as a result of this Initiative.

Percentage of unsubmitted SAKs sent to the laboratory for testing.

Based on agency self-report data, unsubmitted kits eligible to move to NHSPFL were submitted previously in this Initiative. During this reporting period, an additional 14 additional previously unsubmitted kits from past years and 50 kits with incomplete analysis were identified, submitted to the lab, and are currently being analyzed.

Percent reduction in the number of unsubmitted SAKs requiring DNA testing.

As of May 2023, the NH State Police Forensic Lab advised that 100% of SAFE-ITR kits that were sent for external analysis had been processed. The recently submitted kits have been outsourced by the Lab. The NHSPFL Lab continues with their process of internal review and reporting out to NH law enforcement and County Attorney Offices.

Number of SAEKs inventoried and reported that:

- A. Were identified as previously tested: Exact number not available but is greater than 77.
- B. Do not require testing: Exact number not currently available.
- C. Were sent to the laboratory for testing: Approx. 656 previously unsubmitted or "incomplete analysis" kits since Program work began.
- D. Had a final disposition (e.g., were adjudicated): Unknown.

Number of deliverables that meet expectations:

- **Deployment of an automated information system:** Statewide kit tracking has now been deployed for one year. Tracking labels are available at the NH DOJ for when hospitals request additional kit supply. As use of the tracking system has not been necessary in all hospitals or by all law enforcement agencies, outreach and training will

continue as kits are collected in additional areas of the state. A usage alert continues to be sent to the SAFE-ITR Coordinator when kit tracking is initiated by a medical facility; this allows for timely outreach to law enforcement agencies who are receiving a kit and will be using the kit tracking system for the first time.

- **Commencement and completion of inventory:** NH's Tracking System is now functional and inventory reports can be generated. As of 09/13/23:
 - **243** trackable kits are available for use in hospital supply across the State. Hundreds more are available for distribution by the NH DOJ
 - **422** trackable kits are at NH police departments, this includes contemporary kits pending lab submission (9), contemporary kits pending transfer to another agency for jurisdictional reasons (0), and kits received back from the Lab for retention pursuant to NH RSA 21-M:18
 - **334** trackable kits are in-house at the NH State Police Forensic Lab. This includes some kits from past years that were outsourced as part of the SAFE-ITR Program and kits awaiting return to law enforcement agencies after analysis was completed.
 - **37** trackable kits have been sent out of State for jurisdictional reasons since the launch of the kit tracking system: **3** in this 60-day reporting period. This information is shared with neighboring states that also have kit tracking programs.
 - **36** out-of-state kits received in New Hampshire for jurisdictional reasons have been incorporated into NH's tracking system: **5** in this 60-day reporting period.
- **Commencement of tracking and reporting on SAEK movement:** The tracking system identifies kits that have not been submitted to the NH State Police Forensic Lab. The SAFE-ITR Coordinator continues to follow up on kits when necessary to prevent an accumulation of unsubmitted kits in NH going forward. Since November 2022, the 10 County Attorneys around the State have received a monthly status report of kits in their respective County and are notified of any unsubmitted kits. Additional tracking and reporting data will become available as the system is used more in the months to come.
- **Develop website to report metrics** SAFE-ITR Reports will continue to be posted on the NH DOJ website (www.doj.nh.gov) and can be found under the "Resources" tab. Under the "Crime Victims" tab, there is a link to the "Office of Victim/Witness Assistance" and the reports appear under "Policies, Reports, Publications."
