SEXUAL ASSAULT:
An Acute Care Protocol for Medical/Forensic Evaluation

HISTORY OF THE NEW HAMPSHIRE SEXUAL ASSAULT PROTOCOL PROJECT

On April 26, 1988, the New Hampshire Legislature passed RSA 21-M:8-d, which made the State responsible for the payment of forensic medical examinations of sexual assault victims when there is no insurance (See Appendix A). Another statute, RSA 541-A, authorized the New Hampshire Department of Justice (Attorney General’s Office) to “implement rules establishing a standardized sexual assault protocol and kit to be used by all physicians or hospitals in this state when providing physical examinations of victims of alleged sexual offenses;” This Protocol is a statutory mandate for all hospitals and physicians in the state.

In 1989, the New Hampshire Attorney General's Office formed the Sexual Assault Protocol Committee representing the medical, legal, law enforcement, victim advocacy and forensic science communities, to establish a New Hampshire protocol and kit. The Committee took great care to make recommendations based upon the physical and emotional needs of the sexual assault victim, reasonably balanced with the basic requirements of the legal system.

The result was the publication of Sexual Assault: A Protocol for Medical and Forensic Examination, and a standardized evidence collection kit to be used in all of the hospitals in the state. This project was completed in June 1989.

Recognizing that forensic science is a field in continual evolution, the Protocol is continually being revised in an effort to improve evidence collection outcomes for patients who have experienced sexual assault. The following is an up-to-date list of protocol revisions:

THE NEW HAMPSHIRE SEXUAL ASSAULT AND NURSE EXAMINER ADVISORY BOARD

Co-Chair: Lynda Ruel, Director
Office of Victim/Witness Assistance
NH Attorney General's Office

Co-Chair: Janet Carroll, RN, CEN, SANE-A
SANE Coordinator
NHCADSV
Dartmouth Hitchcock Medical Center

Co-Chair: Jen Pierce-Weeks, RN, SANE-A, SANE-P
SANE Coordinator
NHCADSV
International Association of Forensic Nurses

Detective Stacey Blanchette
Bow Police Department

Jean Carroll
PREA Advocate
NH Department of Corrections

Tracy Dumais-Cilibrasi
Victim’s Compensation
NH Attorney General’s Office

Amy Culp
UNH - Sexual Harassment and Rape Prevention Program

Detective Julie Curtin
Concord Police Department

Betsy Haley
SASS of New Hampshire

Deb Hastings, RN, PhD
Dartmouth-Hitchcock Medical Center

Sergeant Sara Hennessey
NH State Police

Dr. Elizabeth Karagosian, MD
Southern New Hampshire Medical Center

Kathleen Kimball, Coordinator
NH SART Program
NH Attorney General’s Office

Lisa Lamphere
Victim’s Compensation
NH Attorney General’s Office

Kevin McMahon, MS
NH State Police Forensic Laboratory

Michelle McMurray, RN, SANE A/P, AND
Elliot Hospital, Mass General Hospital

Christina Presenti
New Hampshire Coalition Against Domestic and Sexual Violence

Detective Diana Scott
Bow Police Department

Tom Velardi, JD
Strafford County Attorney

OVERVIEW

PREFACE

To maximize the continuity of care for patients who have experienced sexual assault, health care professionals, in concert with other professionals who care for victims of sexual assault in New Hampshire, have developed the following approach to assist New Hampshire’s medical community in the care of patients reporting an acute sexual assault.

INTRODUCTION

According to the American College of Emergency Physicians, “appropriate management of the sexually assaulted patient requires standardized clinical evaluation, and effective interface with law enforcement for the handling of forensic evidence, and coordination of the continuum of care with a community plan. Appropriate management of the sexually assaulted patient requires the clinician to address the medical and emotional needs of the patient while addressing the forensic requirements of the criminal justice system. Medical issues include acute injuries and evaluation of potential sexually transmitted infection and pregnancy. Emotional needs include acute crisis intervention and referral for appropriate follow up counseling. Forensic tasks include thorough documentation of pertinent historical and physical findings, proper collection and handling of evidence and presentation of findings and conclusions in court.” ¹

This document seeks to assist the medical professional in accomplishing the above tasks and meet the standard of care requirements.

¹ The Evaluation and Management of the Sexually Assaulted or Abused Patient, ACEP 2014
THE NEW HAMPSHIRE SEXUAL ASSAULT AND NURSE EXAMINER ADVISORY BOARD

In 1997 a statewide multidisciplinary team of professionals was created by the Attorney General’s Office to oversee the New Hampshire Sexual Assault Nurse Examiner (SANE) Program. The goal of the SANE Advisory Board was to encourage and promote SANE practice statewide in an effort to better serve victims of sexual assault. Since that time, the role of the Board has shifted to the development and implementation of a long-term statewide response to sexual assault.

The Board acts as a statewide Sexual Assault Resource Team (SART), and consists of invited representatives from the Attorney General’s Office, the New Hampshire Coalition Against Domestic and Sexual Violence and their member organizations, SANEs, law enforcement, prosecution, forensic laboratory personnel, health care organizations, as well as other disciplines.

The Board is governed by an established set of Bylaws, and its purpose is to provide on-going necessary revision to the Attorney General’s Sexual Assault: An Acute Care Protocol for Medical/Forensic Evaluation, maintain education and certification guidelines for nurses acting in the role of SANEs, make quality assurance recommendations to emergency department personnel/hospitals utilizing the statewide protocol and evidence kit; provide on-going development, implementation and evaluation (quality assurance/improvement) of the SANE Program; provide ongoing evaluation (quality assurance/improvement) of sexual assault services provided throughout New Hampshire (ie: evidence collection quality, multidisciplinary team technical assistance, etc.); oversee and evaluate the effectiveness of the SANE Program Director(s); and work collaboratively to resolve program-related and sexual assault response-related problems.
NEW HAMPSHIRE’S SEXUAL ASSAULT AND RELATED LAWS

OTHER STATUTES

Other statutes regulating sexual activity in New Hampshire include:

- **Intentional Contribution to Delinquency** under RSA 169:41 by using a minor in any acts of sexual conduct in order to create obscene material;
- **Capital Murder** under RSA 630:1 and **First Degree Murder** under RSA 630:1-a where a sexual assault occurs before, during or after a homicide;
- **Incest** under RSA 639:2 (having sex or living with a person closely related by blood);
- **By soliciting penetration or by having a child pose for child pornography** (RSA 639:3);
- **Prostitution** under RSA 645:2 by involving in prostitution a child under the age of 18 or by involving another by force or intimidation;
- **Child Pornography** under RSA 649-A:3 by participating in or directing a visual representation of a child engaged in sexual activity;
- **Computer Pornography and Child Exploitation** under RSA 649-B:3 by soliciting sexual conduct of or with any child or **Certain Uses of Computer Services Prohibited** under RSA 649-B:4 by using a computer to seduce, solicit, lure, or entice a child to engage in sexual activity;
- **Obscene Matter** under RSA 650:2 by presenting or directing an obscene play, dance or performance, or participating in that portion thereof which makes it obscene when it involves a child.

OTHER IMPORTANT LEGAL PRINCIPLES

**Victim’s Testimony:** If a case goes to trial, the victim will almost certainly have to testify.

**Rape Shield Privilege:** Consensual sexual activity with someone other than the perpetrator is generally inadmissible. It is not admissible to show promiscuous character. It may be admissible to show the source of semen or injury. Sexual activity with the perpetrator is generally admissible with adult victims to demonstrate consent.

**Clothing:** Manner of dress is inadmissible to imply consent.

**Spousal Privilege:** Inapplicable to sexual assault cases.

**Corroboration:** In many, if not most, sexual assaults there are no eye witnesses and no physical evidence. According to New Hampshire law (NH RSA 632-A:6), the credible and reliable testimony of a victim is sufficient to prove any sexual assault, even where there is no independent proof. Notwithstanding this statute, accurate evidence collection and documentation are part of meeting the medical standard of care for treatment of the patient.
EMOTIONAL NEEDS OF THE PATIENT

CRISIS CENTER ADVOCACY

In all instances the hospital or provider shall immediately call an advocate from the local community based crisis center to come to the hospital and meet with the patient. Only advocates from the New Hampshire crisis centers listed in Appendix B are able to provide confidential, privileged communication in the state of New Hampshire under RSA 173-C:2. In your role as a medical provider it is your responsibility to ensure that an advocate from a local crisis center, that meets the criteria for confidential communication, is present.

The advocate should be introduced to the patient, and the patient should be allowed to choose whether or not to speak with the advocate. Having the advocate already present at the hospital will allow the patient to more readily access the support offered by the local crisis center, if she/he chooses. Confidential patient record information should not be shared with the crisis center advocate unless it is done so by the patient, thus avoiding any medical records confidentiality issues.

Crisis center advocates are specially trained to provide patients with free, confidential, non-judgmental, emotional support, information, and resources so that they can make informed decisions about their care following a sexual assault. The role of the advocate at the hospital is to support the patient during the medical exam and to help the patient understand the process and options that are available to them. Sexual assault is a traumatic experience that can be difficult to process, and patients may experience a wide range of emotions. The crisis center advocate, whose communication with the victim is privileged under RSA 173-C:2, can help address these emotional needs while maintaining the patient’s confidentiality. Patients who have experienced sexual assault are usually better able to respond to procedures when they are supported, believed and safe.

It is important that the Emergency Department staff be familiar with their local crisis center(s) and the services that they offer the medical facility. (See Appendix B)

WORKING WITH VICTIMS

Sexual Assault is a form of interpersonal violence that is prevalent in the United States and here in New Hampshire. Anyone can become a victim of sexual assault, and sexual violence transcends every socio-economic, cultural, gender, sexual orientation, age, physical ability, mental development and religious classification. Sexual offenses can be different kinds of crimes, including sexual assault, incest, sexual harassment, indecent exposure, child molestation, marital sexual assault and voyeurism. In each of these cases, the assailant uses sex to exert control and power over the victim. The offender may be a stranger to the victim, but most often the offender is someone the victim knows and trusts. Indeed, the offender may be an acquaintance, partner, husband, parent or other family member. A pre-existing relationship between the victim and offender does not make the crime any less serious or traumatic, and may in fact present additional challenges for the victim.

As with all forms of trauma, each individual has her/his own way of coping with the effects of trauma. Sexual assault is certainly no different, and in the aftermath of an assault a victim may
present exhibiting a wide range of emotions. Some victims may appear calm, indifferent, submissive, angry, uncooperative or even hostile to those trying to help them. They may also laugh or giggle at seemingly inappropriate times. Because everyone reacts differently following a sexual assault, victims should be allowed to express their emotions in a non-judgmental and supportive environment. **It is critical that medical staff understand that there is no ‘right’ or ‘wrong’ way for a victim to respond following an assault, and a victim’s emotional reaction should in no way influence the quality of care a patient receives.** How a victim presents emotionally at the hospital is in no way indicative of the degree of seriousness of the assault, nor should it be taken as evidence that an assault did or did not occur.

While reactions to a sexual assault may vary significantly for each individual, there are certain common feelings and fears that many victims face including:

- Fear of not being believed
- Fear of being blamed for the assault
- Fear that the offender may come back, and/or retaliate
- Fear of unknown medical and/or criminal justice processes
- Fear of friends and family finding out
- Fear of being labeled a ‘victim’
- Feelings of shame and/or embarrassment
- Feelings of guilt
- Feeling suspicious and/or hyper-vigilant
- Feeling unsafe or scared
- Feeling a loss of control

It is the duty and obligation of the responding personnel to do their best to address these concerns in a way that is appropriate and respectful to the needs of the victim.

**RESPONDING TO VICTIMS**

Members of the hospital and/or medical staff may be the first contact that a victim has after being sexually assaulted. As such, it is crucial that the response the victim receives be non-judgmental, supportive and informed to ensure that they do not experience further trauma. An appropriate response by the hospital and/or medical staff can significantly impact in a positive way the long-term recovery of victims. Below are some suggestions for responding appropriately to the needs of sexual assault victims in a hospital setting.

- Be aware that some victims may have had previous negative experiences with medical personnel, and may be wary of how they will be treated now. If the victim is previously
known to the medical facility or provider for other reasons unrelated to the sexual assault, it is important that the victim be treated in a fair and impartial way, regardless of any previous contact.

- In order to prevent making incorrect assumptions, nothing about the victim’s life or the nature of the assault should ever be assumed. This is especially true for assuming the sexual orientation of either the victim or the offender. There are many documented instances of same-sex sexual assault, and these assaults should be addressed in the same manner as all other forms of sexual assault. Also, the gender of the offender should never be assumed, since both men and women are capable of perpetrating sexual assaults.

- Experiencing a sexual assault is in many ways the ultimate loss of control for victims. For this, and other reasons, it is imperative that the patient be informed about the medical process, and every effort should be made to give a sense of control back to the patient. Care should be taken to explain each step of the medical process, and the patient should be allowed to ask questions and make decisions about the care they are receiving. It is important that the medical personnel respect any choices made by the victim.

- It is important to note that offenders can often be family members or caretaker/service providers, especially in child abuse and elderly/incapacitated adult abuse cases. There may also be times where the offender presents as the “secondary victim” or “helping friend”. Professionals need to be aware of this so the patient does not experience re-victimization, or have their decisions unduly influenced by the unwanted presence of this individual. Always ask the victim (without anyone else present) who they would like to have in the exam room and be sure to respect their decision.

- Every effort should be made by the medical personnel to assist and facilitate communication with the victim. Victims may have difficulty communicating for a number of reasons including: shock from having experienced trauma, having been drugged, not speaking English, being hearing impaired, having a cognitive defect or impaired or reduced mental capacity that makes it difficult to comprehend questions, or they may not possess the language and communication skills necessary to explain what has happened to them. Medical personnel should make every possible effort to clearly and effectively communicate at a level that is appropriate and commensurate with the victim’s ability.

- When treating the hearing impaired patient, Section 504 of the Federal Rehabilitation Act of 1973 establishes that any agency (including hospitals and police departments) that directly receive federal assistance or indirectly benefit from such assistance, must be prepared to offer a full variety of communication options in order to ensure that hearing impaired persons are provided with effective health care services. These options, which must be provided at no cost to the patient, include an arrangement to provide interpreters who can accurately and fluently communicate information in sign language. Please refer to your hospital policies and protocols. In addition, examiners may contact the Northeast Deaf and Hard of Hearing Services during business hours at 1-603-224-1850 x. 250 and the Emergency Interpreter Referral System, seven days a week, 24 hours a day at 1-800-552-3202, for emergencies only.
• Feelings of guilt and shame, and that the victim somehow ‘caused’ the assault are common experiences. These feelings can be especially strong in cases where alcohol was involved, or when a male is the victim of the assault. Victims may feel ashamed that they were unable to protect themselves from the assault, and/or confused if they experienced an involuntary physiological response to the assault. It is important that the victims be reassured that the assault was not their fault and whatever they did to survive the assault was the right thing to do.

• It is important to recognize that sexual assault affects everyone involved with the primary victim of the crime. The family and friends of the sexual assault victim are also, in many ways, victims of the sexual assault and may experience feelings similar to those of the actual victim. It is important to recognize that this population may need assistance as well, and to help them access the resources available at the local crisis center. These so-called ‘secondary victims’ are usually able to better support and respond to the needs of the primary victim when they themselves are receiving support and services.

• Certain victims may be hesitant to present for care out of fear that they will get in trouble because of their conduct before or after the assault. This can be a particular concern for the adolescent population where underage drinking, drug consumption and sneaking out or lying to their parents or caregivers may have occurred. It is important to reassure victims that any decision or choice they made does not mean they deserved to be sexually assaulted.

• Victims may experience a feeling of loss of control after a sexual assault and the medical/forensic exam is an opportunity to provide them the opportunity to regain control as they make informed decisions about what happens to their body and the evidence throughout the process. See Appendix S for frequently asked questions about the evidence analysis of sexual assault evidence.

PRESENTATION OF PATIENT

EMERGENCY MEDICAL SYSTEM (EMS) RESPONSE

• A life-threatening emergency should be treated as dictated by area Emergency Medical Services (EMS) protocols.

• Because of the health implications associated with sexual assault, the patient should always be encouraged to seek medical care as soon as possible.

• If the patient is 18 or older, and a sexual assault has occurred, the patient should be asked if she/he would like the police contacted.

• If the patient is under 18, and a sexual assault has occurred, the police should be contacted immediately.

• The patient should be advised not to eat, drink, shower, douche, go to the bathroom or change clothing if at all possible.
If pre-hospital personnel are called and there is no life-threatening situation and the crime is being reported, they should wait for police to secure the scene, as this is a crime scene.

If a cellular phone or HEAR system is used, the word “assault” not “sexual assault” should be used in reporting with further details given at the hospital. In order to protect the privacy of the patient, whenever possible, a landline should be used to report to the hospital.

If the patient has removed clothes worn during the assault, they should be put in separate paper bags and be brought to the hospital with the patient.

If for any reason, regardless of gender, EMS personnel need to touch the patient, verbally request permission to do so from the patient, explaining what needs to be done and why.

Limit the amount of physical contact with the patient to avoid unnecessary transfer of physical evidence.

When transferring the patient to a local hospital for treatment, call dispatch and request that crisis center personnel be dispatched to the hospital as well.

If the patient refuses treatment and/or transport to the hospital, document all findings and observations, and complete the necessary paperwork.

**LAW ENFORCEMENT ACCOMPANIMENT**

- Depending on your area, law enforcement investigators may be present, or not, during the examiner’s history taking. The final decision in regards to who is present during history taking is one made by the patient.

- **There is no time when it would be appropriate for the law enforcement officer to be present during the physical examination and evidence collection.**

- The role of law enforcement in sexual assault investigations is thoroughly discussed in the Attorney General’s *A Model Protocol for Response to Adult Sexual Assault Cases* (2012).

- When a patient has reported the assault to law enforcement, it is appropriate and expected that the examiner share pertinent information with that law enforcement official regarding the sexual assault.

- For clarification regarding the Health Information Portability and Accountability Act (HIPAA) see *Appendix P*.

**EMERGENCY DEPARTMENT RESPONSE**

- Whether the sexually assaulted patient arrives by ambulance, alone or with law enforcement, the sexual assault should be treated as a medical emergency.

- The patient should be escorted as soon as possible to a private location within the hospital where an examination and treatment can take place.
• **THE HOSPITAL SHALL IMMEDIATELY CALL A SEXUAL ASSAULT CRISIS ADVOCATE FROM THE LOCAL CRISIS CENTER AND HAVE THAT PERSON AVAILABLE TO MEET WITH THE PATIENT.**

• The examiner should explain to the patient that crisis center advocates provide free, confidential crisis intervention and on-going counseling and emotional support, both to the patient and the patient’s family. The advocate can also explain legal procedures and provide necessary referrals such as support groups and therapists.

• Upon crisis center advocate arrival to the hospital, the patient should be given the option of meeting privately with that advocate. If the patient declines, the examiner should give the patient contact information about the local crisis center. Whenever possible, the crisis center advocate should wait until the examination is complete to ensure the patient has not changed her mind. The patient should be offered the opportunity to call the local crisis center at the end of the exam.

• In hospitals that provide Sexual Assault Nurse Examiner (SANE) services, the SANE should be notified as soon as the patient presents at the emergency room.

• Regardless of who will complete the medical/forensic evaluation, all the available options should be reviewed with the patient. The patient’s decision whenever possible should be carried out by the health care providers.

---

**OUT-OF-STATE SEXUAL ASSAULT**

Because the state of New Hampshire borders Canada, Vermont, Maine and Massachusetts, it is not only conceivable but also probable that a victim of sexual assault, who experienced the assault in another state or country, will come to a New Hampshire hospital for an examination.

In the event the sexual assault occurred outside the state of New Hampshire, the examiner should adhere to the following recommendations:

• Utilize the **New Hampshire Sexual Assault: An Acute Care Protocol for Medical/Forensic Evaluation, Eighth Edition 2015** and the accompanying **New Hampshire evidence collection kit**.

In all cases of reported sexual assault, the **law enforcement agency in the jurisdiction where the assault occurred** is the law enforcement agency charged with investigating the assault and facilitating transfer of the evidence collected from the hospital to the appropriate forensic laboratory in the state where the assault took place. If the crime occurred outside of New Hampshire or the local law enforcement agency in the jurisdiction where the crime occurred cannot pick up the kit, the law enforcement agency responsible should contact the New Hampshire State Police to request assistance in evidence kit pick up, this will allow the examiner to turn the kit over to the New Hampshire State Police.
SPECIAL PROGRAMS

THE SEXUAL ASSAULT NURSE EXAMINER (SANE) PROGRAM

New Hampshire’s goal is to provide statewide consistent care that respects the emotional and physical needs of the sexually assaulted patient while collecting the best possible medical/forensic evidence. The state recognizes the many emergency room doctors and nurses who currently provide excellent care to victims of sexual assault, but in an effort to ensure that this care is uniform and standardized throughout the state, the Sexual Assault Nurse Examiner (SANE) Program was created.

A SANE is a Registered Nurse (RN) who has been specially trained to provide comprehensive care to patients who have experienced sexual assault. The RN has demonstrated competency in conducting a medical/forensic examination as well as the ability to testify in court when necessary. There is differentiation made between the SANE, who evaluates the adolescent and adult population, and the SANE who is additionally trained in the evaluation of the pre-pubertal child.

While the goal is to have all sexual assault medical/forensic examinations in New Hampshire performed by Sexual Assault Nurse Examiners or physicians and other advanced practice professionals who have gone through the SANE training or its equivalent, in communities where this approach is not possible, appropriate education of emergency department personnel is a top priority. For more information call the SANE Director at (603) 224-8893, extension 307.

NEW HAMPSHIRE VICTIMS’ COMPENSATION PROGRAM

The New Hampshire Victims’ Compensation Program automatically covers the cost of the medical/forensic examination for victims of sexual assault, one follow up exam and a second follow up exam with infectious diseases, when HIVnPep Prophylaxis medications are provided to the patient. See Appendix N for additional information on the HIVnPEP billing protocol.

In some instances, Victims’ Compensation will cover the cost of the medical/forensic examination associated with a sexual assault, even after the 5 day window to utilize the evidence collection kit has passed following the sexual assault.

Patients who are victims of sexual assault may also be eligible to apply to the New Hampshire Victims’ Compensation Program for compensation above and beyond the standard medical/forensic examination such as medical/dental expenses, mental health therapy expenses, lost wages or other out-of-pocket expenses not covered by insurance or other resources available to the victim. The compensation must be directly related to the victim’s condition, as a result of the crime. Property losses and pain and suffering cannot be compensated using this method of compensation.

In order to qualify for compensation, above and beyond the standard medical/forensic examination, the victim must report the crime to law enforcement, or, if the victim agrees to a forensic evidence collection, and if the examination is sought within 5 days of the assault, the
victim shall be deemed to have made a report to law enforcement and be credible evidence that an eligible crime has occurred. The victim should be told to call 1-800-300-4500 for information about the compensation program or to speak with the crisis center advocate about the program. For more information go to: http://doj.nh.gov/grants-management/victims-compensation-program/index.htm

The victim can receive assistance filling out the appropriate forms and applying to victim’s compensation through their local crisis center. The victim is also provided with information about applying for Victim’s Compensation as part of their discharge information contained in the sexual assault evidence collection kit.
PATIENT OPTIONS

PRE-PUBESCENT CHILDREN

A medical evaluation holds an important place in the assessment of child abuse. All children who are suspected victims of any type of child abuse should be offered a medical evaluation. The goal of the medical evaluation is to establish the safety, health and well-being of the child and to collect and preserve potential evidence that may be used in future legal proceedings. In addition, this evaluation will establish any needed follow up referrals necessary in maintaining good health.

In these types of cases, it is critical that there be a consistent approach to diagnosis, evaluation, and medical/forensic treatment. To this end, the New Hampshire Attorney General’s Task Force on Child Abuse and Neglect, Department of Health and Human Services and the New Hampshire Children’s Alliance (formerly known as the New Hampshire Network of Child Advocacy Centers developed a comprehensive document entitled Child Abuse and Neglect, Third Edition, 2008). This protocol can be found on the Attorney General’s web site by following the appropriate link http://doj.nh.gov/criminal/victim-assistance/documents/abuse-investigation-protocol.pdf.

While many children do not come forward immediately following the sexual abuse, children who DO present in an acute manner will require thorough evidence collection procedures. In those instances, the State of New Hampshire Sexual Assault Evidence Collection Kit should be modified to accommodate the examination of the child. The highlights of these modifications can be found on the instruction sheet and in Step 2.

When examining a child, the local crisis center should be contacted to support the non-offending parents/family members during the exam.

In addition, there is a Child Advocacy Center (CAC) (See Appendix C) in each county. The purpose of these centers is to provide a comprehensive, culturally competent, multidisciplinary team response to child abuse and neglect cases, in a dedicated child-friendly setting. The team response includes representatives from law enforcement, DCYF, prosecution, mental health, medical, and victim/witness and crisis center advocates. The goals of a CAC include reducing the trauma to child victims by decreasing the number of interviews, promoting collaboration among disciplines and enhancing the overall investigations and prosecutions of child abuse and neglect cases. At present, unless the CAC is medically based, referrals come in through law enforcement and DCYF. See Appendix D for a list of Victim/Witness Assistance Programs.

ADOLESCENTS

The sexual assault of an adolescent, and the decision whether to perform the sexual assault kit can be difficult. For female patients who have reached the onset of their menses, this protocol should be followed. For male patients who have reached Tanner Developmental Stage III, this protocol should be followed. All other populations of children require the practitioner to follow the previously mentioned Child Abuse and Neglect, Third Edition, 2008 and the evidence kit with modifications as described in this protocol.
REPORTING TO LAW ENFORCEMENT AND OTHER STATE AGENCIES

Recognizing that a successful prosecution of a sexual assault case is dependent upon a cooperative victim, *most sexual assault cases of patients over the age of 18, are not required to be reported to the police, and it is the victim’s decision whether or not to report the crime.* The current reporting New Hampshire laws for under RSA 631:6 are as follows:

1. **If the sexual assault victim is under the age of 18**, any injury or child maltreatment that has been caused or suspected to have been caused by abuse or neglect must be reported to the New Hampshire Division of Children Youth and Families (DCYF) Central Intake Office at 1-800-894-5533 and to law enforcement. **There are no exceptions.**

2. **If the sexual assault victim is 18 years of age or older and has received a gunshot wound or other serious bodily injury**, the injuries must be reported to law enforcement.
   - “Serious bodily injury” is defined by RSA 161-F as “any harm to the body which causes or could cause severe, permanent or protracted loss of or impairment to the health or the function of any part of the body”.

3. **Incapacitated and/or Elderly Adults**: RSA 161-F provides protection for incapacitated adults who are abused, neglected or exploited. A report must be made to the Bureau of Elderly and Adult Services (BEAS) Central Intake Office at 1-800-949-0470.
   - This Statute defines “incapacitated” as any person that is 18 years of age or older that the physical, mental, or emotional ability of the person is such that he/she is unable to manage personal, home, or financial affairs in his or her own best interests, or he/she is unable to delegate responsibility to a responsible caretaker or caregiver of any age over 18.
   - There is a common misunderstanding regarding reporting requirements when “elderly” sexual assault patients are treated by healthcare providers. Currently, there is no statute that requires a report to law enforcement or BEAS if an elderly victim has the physical, mental, and emotional ability to care for and manage affairs for oneself.

REPORTING TO LAW ENFORCEMENT

Most adult sexual assault injuries are not required to be reported to the police, and it is the victim's decision whether or not to report the crime to law enforcement.

The current rules adopted under RSA 631:6 are as follows: If the victim is 18 years of age or older, and has received a gunshot wound or other serious bodily injury, the injuries must be reported to law enforcement. As defined in RSA 161-F:43 "serious bodily injury" means any
harm to the body which causes or could cause severe, permanent or protracted loss of or impairment to the health or of the function of any part of the body.

One exception as defined in RSA 631:6,: A person who has rendered treatment or other assistance is excepted from the reporting provisions if the person seeking or receiving treatment or other assistance: (a) is 18 years of age or older, (b) has been a victim of a sexual assault offense or abuse as defined in RSA 173-B: 1, and (c) objects to the release of any information to law enforcement officials. The exception shall not apply if the sexual assault or abuse victim is also being treated for a gunshot wound or other serious bodily injury, this exception does not apply and the person rendering treatment is required to report to law enforcement.

See Not Reporting below.

REPORTING CHILD ABUSE-THE LAW

In accordance with New Hampshire RSA 169-C:29, information by any citizen regarding the suspected abuse or neglect of a child is not confidential and must be reported to the child protection agency, Division for Children Youth and Families (DCYF) if the victim is under the age of 18. The law specifically states: “Any physician, surgeon, county medical examiner, psychiatrist, resident, intern, dentist, osteopath, optometrist, chiropractor, psychologist, therapist, registered nurse, hospital personnel (engaged in admission, examination, care and treatment of persons), Christian Science practitioner, teacher, school official, school nurse, school counselor, social worker, day care worker, any other child or foster care worker, law enforcement official, priest, minister, or rabbi or any other person having reason to suspect that a child has been abused or neglected shall report the same in accordance with this chapter.” (See Appendix F).

Failure to comply with this law is a misdemeanor offense under RSA 169-C:39.

PROCEDURES FOR REPORTING CHILD ABUSE

Anyone who has reason to suspect child abuse and neglect must report to the DCYF Central Intake Office by telephone at 1-800-894-5533 or 603-271-6562 or by facsimile at 603-271-6565. After regular business hours, child abuse emergencies are to be referred to the local law enforcement agency.

In an emergency, life-threatening situation, a violent or near violent situation, 9-1-1 should be called for an immediate law enforcement response. The statewide enhanced 9-1-1 system will automatically connect the caller to the proper law enforcement agency from where the call originates.

If a body map is not completed as part of the kit or forensic evidence collection and you’d like to include one in your DCYF report, use a body map similar to that provided in the sample reporting to DCYF form located in Appendix G.
**IMMUNITY**

New Hampshire requires the reporting of ALL **suspected** child abuse and neglect. Absolute proof of abuse or neglect is not required before reporting. Those who are uncertain about reporting because of concern regarding the legal consequences of their action should make a “good faith” decision. New Hampshire law provides protection against civil and criminal liability if a citizen makes a “good faith” report.

In accordance with RSA 169-C:31: “Anyone participating in good faith in the making of a report pursuant to this chapter is immune from any liability, civil or criminal, that might otherwise be incurred or imposed. Any such participant has the same immunity with respect to participation in any investigation by the department or judicial proceeding resulting from such report.”

**REPORTING ABUSE OF ELDERLY AND INCAPACITATED ADULTS - THE LAW**

Elderly and incapacitated adults are at extremely high risk for experiencing a sexual assault. New Hampshire has a **mandatory reporting law.** Any person who has reason to believe that any incapacitated adult falling under this statute (See Appendix H) has been subjected to physical abuse, neglect or exploitation must report the abuse to their local District Office of the New Hampshire Bureau of Elderly and Adult Services (BEAS). See Appendix I for a list of BEAS offices. For more information, call (during business hours) the **Bureau of Elderly and Adult Services at 1-800-949-0470 or 603-271-7014.**

<table>
<thead>
<tr>
<th>Reasons Why Elderly Victims May Not Want, or are Unable, to Report or Assist with the Investigation</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Victims may be reluctant to talk about the attack, report it, or accept help because of the stigma attached to being a victim of sexual abuse or out of fear of retaliation by the perpetrator. Generational values may make it difficult for some victims to talk about sexual abuse and/or body parts.</td>
</tr>
<tr>
<td>• Where the abuser is a relative or home caregiver, the victim may be completely dependent upon the caregiver to meet those essential needs (food, medicine, shelter, hygiene) that allow her to remain in her home.</td>
</tr>
<tr>
<td>• Impaired memory, vision or hearing loss may limit a victim’s ability to report episodes or be an accurate witness.</td>
</tr>
<tr>
<td>• Examination may be much more difficult or even impossible as a result of physical conditions such as the victim’s limited ability to move or reposition themselves for an examination.</td>
</tr>
<tr>
<td>• As a result of dementia, victims may not be able to understand that they were assaulted and may be unable to cooperate with exams.</td>
</tr>
</tbody>
</table>
REPORTING ANONYMOUSLY

Some patients who present themselves to the emergency department for medical/forensic treatment may, because of the trauma they have experienced, be undecided over whether to report the crime to law enforcement. The Anonymous Kit cannot be completed on anyone under the age of 18. No kit analysis shall be performed until a report is made to law enforcement.

Recognizing the dual importance of being sensitive to the needs of the patient and the timely collection and preservation of physical evidence, the anonymous reporting procedure was developed with respect to both of these considerations. The anonymous reporting procedure ensures that victims of sexual assault, who are undecided over whether or not to report the assault, have the opportunity to retrieve evidence that would otherwise be destroyed through normal activity. Patients may maintain their anonymity with law enforcement until such time as they decide to report the crime.

The evidence is collected in accordance with the State of New Hampshire Office of the Attorney General’s *Sexual Assault: An Acute Care Protocol for Medical/Forensic Evaluation (Eighth Edition, 2015)*, except that the identity of the patient is not documented on any of the specimens or paperwork provided in the Sexual Assault Evidence Collection Kit. A unique serial number is provided on the end of each Evidence Collection Kit box and this serial number is used in place of the victim’s name on all specimens and paperwork.

Once the examination is complete, and the patient is discharged, the examiner will turn over the anonymous kit (the same procedure as for other kits) to the law enforcement agency in the jurisdiction where the crime occurred, if the crime occurred in New Hampshire. If the crime occurred outside of New Hampshire or the local law enforcement agency in the jurisdiction where the crime occurred cannot pick up the kit, the examiner will turn over the anonymous kit to the New Hampshire State Police. Law Enforcement will then transport the evidence to the New Hampshire State Police Forensic Laboratory, just as they would in a reported case.

VERY IMPORTANT: ALL KITS, INCLUDING ANONYMOUS KITS SHALL BE TRANSPORTED TO THE STATE POLICE LABORATORY AS SOON AS POSSIBLE BUT NO LATER THAN 14 DAYS FROM RECEIPT.

If the patient ultimately chooses to report the crime to law enforcement, s/he will have received upon hospital discharge the kit serial number from the medical record. The patient will then provide that number to the police so that the evidence may then be associated with the reporting victim and an investigation of the crime, including the examination of the evidence, may commence.

The anonymous kit is kept in storage at the crime lab for 60 days from the date of the medical/forensic examination. If the victim has not reported the crime to law enforcement during this time period, the evidence will be returned to the submitting police department for final disposition. The patient is informed that if s/he ultimately chooses not to report the crime, the evidence, including clothing, will not be returned but will be sent back to the police department for storage or disposal.
It is strongly recommended that if the anonymous victim has not reported the incident to law enforcement during the 60 days that the crime lab will hold onto the kit, the law enforcement agency will store the kit in evidence, upon its return from the crime lab, until the statute of limitations for the offense has run out.

It is important to recognize that any crime victim has the right to report the crime at any time following the commission of that crime. Whether the crime can be prosecuted is a matter that will be determined by the criminal justice system, who will take into account many factors (i.e. statute of limitations).

**NOT REPORTING**

Persons who are 18 years of age or older who are determined competent (not incapacitated) and have not sustained a gunshot wound or serious bodily injury, must consent to having their injuries or assault reported to the police. It is their decision whether or not to report the crime to the police.

If the patient chooses not to report, and an anonymous kit is completed, it is the responsibility of the health care professional to educate the patient on the fact that if s/he ultimately chooses not to report the crime the evidence, including clothing, will not be returned but will be sent back to the police department for disposal after 60 days.
THE MEDICAL/FORENSIC EVALUATION

LOCATION

Adolescents and adults should be treated in a hospital emergency department or a specially designed area with rapid access to the hospital emergency department. Hospitals providing sexual assault treatment should have a 24-hour emergency room facility with staff trained in sexual assault medical/forensic examinations.

HIPAA

The Health Insurance Portability and Accountability Act (HIPAA) regulation is the first federal medical privacy law of its kind in United States’ history. While many states have laws that protect patient privacy, the HIPPA regulation creates a federal floor for privacy protections to ensure that minimum levels of protection are in place in all states.

In the most general sense, the regulation prohibits use and disclosure of protected health information unless expressly permitted or required by the regulation. The regulation requires disclosure (1) to the individual who is the subject of the information and (2) to Health and Human Services for enforcement purposes. The new regulation does not create mandatory reporting in a state where there was no previous mandatory reporting. But, by the same token, HIPAA regulations do not preempt the health care providers’ obligation to report, that which is reportable under New Hampshire law.

The new federal rules do not preempt state laws that are more protective of patient privacy. In addition, the regulation does not preempt state laws that authorize or prohibit disclosure of health information about a minor to a parent or guardian. New Hampshire statutorily grants a patient the right of access to his or her medical records, which are owned by the patient but housed in the possession of the facility or provider. (RSA 151:21)

For a summary of state privacy laws see the Georgetown University Health Privacy Project’s The State of Health Privacy: An Uneven Terrain (Health Privacy Project (July 1999). (www.healthprivacy.org)

CONSENT

It is standard hospital practice to obtain a patient's written consent before conducting a medical examination or administering any treatment. However, informed consent is a continuing process that involves more than obtaining a signature on a form. Therefore, all procedures should be explained as much as possible, and as many times as necessary, so the patient can understand what the examiner is doing and why. Explanation of the examination and treatment process are solely the responsibility of the examiner.

If at any time, a patient expresses resistance or non-cooperation, the examiner should immediately discontinue that portion of the process, discuss any concerns or questions the patient may have regarding that procedure and make a determination about whether or not they can continue. The examiner may consider returning to that procedure at a later time in the examination, but only if the patient then agrees. In either event, the patient should have the right to refuse one or more tests or to refuse to answer any question without that decision negatively impacting the remainder of the exam.
**The Adolescent Patient**

An adolescent brought into the emergency department must give her/his own consent. If the circumstances permit, parental/guardian consent to examine the patient should be obtained but it is not absolutely necessary. The patient should be told that if she/he is under the age of 18, it is mandatory for the examiner to notify the Division for Children, Youth and Families. See Appendix G for a sample report form for DCYF.

**The Incoherent/Unconscious Patient**

Every patient has a right to make informed decisions about their care including participation in or denial of any or all portions of the sexual assault evidence collection kit. There may be situations where there is a high degree of suspicion that a sexual assault has occurred and the patient is unable to provide informed consent due to unconsciousness for reasons that may be permanent or temporary with causes such as head trauma or psychoactive substances. The standard of care in sexual assault cases is a timely medical/forensic exam that includes evidence collection, as evidence is lost with the passage of time.

There may be situations where the patient does not have a health care directive, family member, guardian, or surrogate decision-maker. There may also be situations where that designated individual is the suspected offender. It may not be in the patient’s best interest for any medical staff to approach a suspected offender for consent, regardless of their relationship to patient.

In cases where a patient is determined incapacitated to give formal informed consent, and in the absence of an appropriate proxy, health care institutions will follow their internal consent policies and, where appropriate, utilize the **anonymous evidence collection protocol** for forensic evidence collection until an informed decision can be made by the patient. If the patient regains consciousness they will be given the option to provide consent to law enforcement for the evidence kit to be analyzed. If the patient dies as a result of suspicious circumstances, a report to law enforcement will be made by the healthcare facility and the evidence kit made available for analysis.

A **Sexual Assault Nurse Examiner** (SANE) should be contacted to facilitate such examinations whenever possible as the coordination and facilitation of medical/forensic procedures is crucial to the successful examination of sexual assault patients.

In all cases where there is a question of reduced capacity, the attending/staff physician should determine capacity.

| If there is a conflict regarding capacity and consent recommendations, health care institutions should utilize their resources, including the attending/staff physician, hospital administrator, SANE, Bioethics Committee, Risk Management, and psychiatry as appropriate. |

|  |

In cases where it is determined the patient is currently incapacitated due to circumstances that will allow the patient to regain consciousness in a reasonable timeframe (ie: within a few hours due to alcohol intoxication), care should be taken to secure clothing or other items of evidentiary value and preserve evidential integrity. Health care professionals should not destroy or remove evidence from the patient’s person or their belongings. Do not bathe the patient, brush the
patient’s teeth or perform perineal care until such time as the patient is capable of providing consent.

**Minor Patients**

In the case of a patient (as described above) under the age of 18 years, follow institutional policies for obtaining consent for the examination. If there is reason to believe the consenting adult is the offender, or the consenting adult is refusing the exam, DCYF and law enforcement should be notified. Hospital administration, DCYF personnel and law enforcement should jointly agree on an appropriate approach to obtaining the evidence if it is deemed necessary.

**Suspects**

In cases where law enforcement has obtained a search warrant for the evidence collection on a suspect and the suspect is incoherent or unconscious, health care facilities must comply with the search warrant. See The Policy and Procedure for Suspect Exams in *Appendix R* for additional information.

**ACUTE VERSUS NON-ACUTE SEXUAL ASSAULT**

A medical/forensic examination should be performed in all cases of sexual assault, regardless of the length of time that may have elapsed between the time of the assault and the examination. Some patients may ignore symptoms that would ordinarily indicate serious trauma, both physical and psychological. There may also be areas of tenderness which will later develop into bruises, but which are not apparent at the time of initial examination.

If the assault occurred within 5 days of the examination it should be considered acute, and an evidence collection kit should be used. If it is determined that the assault took place more than 5 days before the examination, it is generally not necessary to use an evidence collection kit. It is important that the examiner realize that evidence may still be gathered by documenting findings made during the medical/forensic history and examination, as well as taking photographs. It is equally important that the examiner be aware that the time frame for specific pieces of evidence may differ from the “5 day” rule. For specific time frames the examiner should reference the specific step in the protocol corresponding to the evidence being collected.

The job of the examiner is to obtain a history, examine the patient thoroughly, describe the findings objectively, collect necessary forensic evidence and treat the patient on an individual basis. Each case should be completed with the knowledge that the examiner may be expected to give testimony as to the patient’s evaluation and treatment.

When a medical/forensic examination is performed, it is vital that the medical and evidence collection procedures be integrated at all times. The coordination of medical and forensic procedures is crucial to the successful examination of sexual assault patients. For example, in order to minimize patient trauma, blood drawn for medical purposes should be done at the same time as blood drawn for evidence collection purposes. When evidence specimens are collected from the oral, vaginal, or rectal orifices, cultures for sexually transmitted infection should be taken at the same time.
**STRANGULATION**

Strangulation as a result of external pressure or blunt force trauma to the neck, is a type of asphyxia characterized by closure of the blood vessels or air passages. (Iserson, 1984) Studies indicate that 23-68% of female domestic violence victims will experience at least one strangulation related incident at the hands of their abusive male partner during their lifetime. (L. Wilbur, 2001) In addition, women who experience intimate partner sexual violence often experience strangulation as a co-occurring issue. (L.B.E. Shields, 2010). New Hampshire statute RSA:631:2 defines strangulation as a felony, states that strangulation, “means the application of pressure to another person's throat or neck, or the blocking of the person's nose or mouth, that causes the person to experience impeded breathing or blood circulation or a change in voice.”

Patients may present with potentially lethal conditions such as fractured trachea, carotid aneurysm or cerebral artery infarct (Knight, 1996) (P.D. Lumb, 2002), similar to patients who’ve experienced blunt force trauma to the neck from accidental means. (E.C. McKevin, 2002)

Because the clinical picture can vary dramatically, from a patient without visible injury, to one with significant visible injury, and because the patient may not mention the strangulation component of their assault, asking about strangulation directly is an important aspect of clinical care. (Pierce-Weeks, 2015)

See Appendix T for a Strangulation tool, as well as recommendations for discharge, that may aid the provider in their assessment of the living strangulation victim.

**Some references that may be helpful to the examiner:**

INCARCERATED PATIENTS

Like all other populations, inmates experience sexual assault. It is imperative that these individuals receive access to a medical/forensic exam that addresses their immediate and long term health needs in a way that also preserves the safety of the hospital staff, Correctional Officers, and community. Transport can be one of the most likely times for violence or escape and as such the following protocol outlines the precautions that must be taken to avoid a potentially dangerous situation. While these policies might seem inhumane or unnecessary to hospital staff and others, these policies exist to ensure safety of the inmate victim, accompanying Correctional Officers, treating hospital staff and others.

For clarification purposes: Prison is for more serious levels of crimes. Jail is for low level, less serious crimes.

Prison Patients

There are currently three prison locations in New Hampshire. Inmates will most often arrive at the hospital accompanied by a minimum of two Department of Corrections (DOC) staff. In the case of female inmates, there should be at least one female staff person. In all cases a DOC staff person will remain in the examination room. The officer in charge of the transport determines which staff member will remain in the room with the inmate throughout the exam. Although a DOC staff person must remain in the room, it is appropriate that they be seated at the head of the bed and/or in a manner where they would not directly observe certain portions of the medical/forensic exam, including but not limited to the pelvic exam. It is important that the examiner’s report accurately reflect the name of the DOC staff person in attendance during the exam, and precisely where that DOC staff person was placed in an effort to maintain the dignity and privacy of the inmate.

Inmates will present to the hospital handcuffed in either waist cuff or leg iron restraints. They should remain handcuffed throughout the exam. If it becomes necessary to remove handcuffs for the purposes of the exam, the DOC staff person will facilitate their removal in the most appropriate manner necessary to ensure staff safety. Inmates will present in the clothing they disclosed in, which may or may not be the clothing worn at the time of the assault. If clothing does need to be collected for purposes of the kit, the transporting DOC staff will provide the inmate with appropriate clothing at the conclusion of the exam.

As always, the patient must consent to all portions of the medical/forensic examination. Although the DOC staff person is present during the exam, they should not influence the inmate in relation to the examination at any time.

Once the medical/forensic examination is complete, if an evidence kit has been collected and sealed, the kit is transferred using proper chain of custody to a DOC staff person who then transports the evidence to the state crime lab. If the state lab is closed, the evidence kit will be stored in a secure refrigerator at DOC until which time it can be delivered to the state lab, at all times following the chain of custody. The manner in which evidence is transferred remains the same whether the sexual assault is inmate-on-inmate, or staff-on-inmate.
According to the Prison Rape Elimination Act Policy and Procedure Directive (PREA PPD), inmate victims of sexual assault shall not be within sight or sound of the perpetrator. Any staff involved in a sexual assault would not be allowed near the inmate and should not be transporting or receiving the evidence. If for any reason there is a question about the chain of custody, the New Hampshire State Police should be called and the New Hampshire State Police Prison Liaison will pick-up and transport the evidence collection kit to the appropriate location for analysis.

Jail Patients

New Hampshire jails are also required to have PREA policies, but these policies may vary between jails. It is encouraged that the jails and/or DOCs make their PREA policies available to the local hospitals responsible for treating inmates and to develop policies that address the appropriate care of sexual assault victims that include/address the way an inmate will present and address the unique safety issues outlined above. As with the prison population, jail staff must remain in the room during the entire exam as outlined above and any and all safety measures required by jail staff should be followed at all times. When an inmate victim presents from a jail, the evidence kit is released to the local police department or local county sheriff while maintaining chain of custody.

COLLECTING AND PACKAGING EVIDENCE

- The examiner should always wear powder-free gloves when collecting and packaging evidence.
- The examiner should always change gloves between specimen collections.
- Clothing and other evidence specimens must be sealed in paper or cardboard containers.
- All wet evidence should be dried prior to packaging whenever possible.
- In the event that the evidence is wet, the items may be first placed in paper bags then into plastic bags, provided that holes for ventilation are made in the plastic bag.
- Urine specimens obtained should be sealed in a biohazard bag, placed on ice, then in a paper bag, and NEVER PLACED INSIDE THE EVIDENCE KIT. Please remind law enforcement to keep on ice or transfer to a freezer.
- All hospital Occupational Health and Safety regulations should be followed per institutional policy.
- Envelopes containing evidence should never be sealed with the examiner’s saliva. Self-adhesive envelopes or tape should be used.
- Paper bags should be sealed with tape, never staples.

CHAIN OF CUSTODY

While medical information and forensic evidence may be collected together, forensic evidence must be collected, preserved and documented in a manner that ensures its admissibility at a later date as evidence in court. The custody of the evidence in the collection kit, as well as any clothing or other collected items, must be accounted for from the time it is initially collected.
until it is admitted into evidence at trial. This is accomplished by establishing a “chain of custody”. Chain of custody chronologically documents each individual who handles a piece of evidence from the time it is collected. The unbroken chain of custody establishes the integrity of the evidence and any subsequent analysis of the evidence and is a prerequisite to admitting the evidence in court.

Sealing the kit with the evidence tape provided, and initialing that seal, ensures the integrity of the medical/forensic evidence by establishing that it has not been tampered with. This also applies to any clothing or other items collected that are not sealed in the kit.

The chain of custody of a piece of evidence is established by documenting the name and date that the item is received and/or transferred to another individual, beginning at the date and time the evidence is initially collected. The evidence must also be labeled with the name of the patient or kit serial number, the sexual assault examiner and the source of the specimen. Additionally, the evidence must be kept in a manner that precludes tampering. This is accomplished by sealing the evidence kit with the evidence tape provided, initialing the seal and by keeping the evidence in a secure place. It is important to emphasize that the documentation of the chain of custody includes the receipt, storage, and transfer of evidence.

STEP 1: AUTHORIZATION FOR COLLECTION AND RELEASE/TRANSFER OF EVIDENCE AND USE/DISCLOSURE OF PROTECTED HEALTH INFORMATION FORM

Fill out all requested information and have patient (or parent/guardian when applicable) and witness sign where indicated. This form should be completed in all instances, regardless of patient age. Fill out all information requested and have patient (or parent/guardian, if applicable) and witness sign where indicated. The bottom of the form indicates where each duplicate copy should go.

NOTE: The top section is for reported/reportable cases, the bottom section for anonymous cases.

STEP 2: SEXUAL ASSAULT EVIDENCE COLLECTION KIT INVENTORY

Fill out all requested information, date and sign. This form should be completed in all instances, and will give the examiner an account of what was and was not collected at the time of the exam should the information be necessary during testimony. This should be retained with the medical record.

STEP 3: SEXUAL ASSAULT MEDICAL/FORENSIC REPORT FORM

Fill out all requested information utilizing the forms provided. This form should be completed in all instances, regardless of patient age. Do not copy and submit the rest of the patient’s medical record in the evidence kit. The bottom of the form indicates where each duplicate copy should go.
**Date and Time of Assault/Date and Time of Collection**

It is essential to know the period of time that has elapsed between the time of the assault and the collection of evidence. The presence or absence of foreign body fluids such as blood, semen or saliva may correspond with the interval since the assault.

**Gender and Number of Offenders**

Forensic serologists seek evidence of cross-transfer of trace materials among the patient, offender(s), and scene of the crime. These trace materials include foreign hairs and the deposit of secretions from the assailant(s) on the patient. The gender of the offender may determine the type of foreign secretions that may be found on the patient's body and clothing. Therefore, the serologist should be informed whether to search for foreign semen or vaginal secretions, so they can focus the analysis on the relevant stains.

**Details of the Assault**

An accurate but brief description of the assault is crucial to the collection, detection, and analysis of physical evidence. This includes the discovery of attempted oral, anal, rectal, and vaginal penetration of the victim, oral contact by the offender, ejaculation (if known by the victim) and penetration digitally or with foreign object(s).

**Action of Patient Since the Assault**

The quality of evidence is critically affected both physically and chemically by actions taken by the patient and by the passage of time. For example, the length of time that elapses between the assault and the collection of evidence, as well as self-cleansing efforts of the patient, can affect the rate of drainage of semen from the vagina or rectum. The presence of evidence such as foreign hairs or fibers deposited on the patient by the assailant or transferred to the patient at the crime scene may also be affected. It is important for the analyst to know what, if any, activities were performed prior to the examination, any of which could help explain the absence of secretions or other foreign material. Failure to explain the circumstances under which semen or other body fluids could have been destroyed might jeopardize criminal prosecution if apparent contradictions cannot be accounted for in court.

**Lubricants/Contraceptive Methods/Menstruation Information**

Lubricants of any kind, including oil or grease, lotions or spermicide, are trace evidence and may be compared with potential sources left at the crime scene or recovered from the body of the assailant. Knowing whether or not a condom was used also may be helpful in explaining the absence of semen.

Tampons and sanitary napkins can absorb all of the assailant's semen, as well as any menstrual blood present. Additionally, the presence of blood on the vaginal swab could either be from trauma or as a result of menstruation.

**Last Consensual Sex**

When analyzing semen specimens in sex-related crimes, forensic analysts sometimes find genetic markers that are inconsistent with a mixture from only the patient and the assailant. A
mixture of semen from a assailant and the patient's pre-assault or post-assault sexual partner could lead to DNA evidence which, if unexplained, could conflict with the patient's own account of the assault.

Many forensic analysts request that the examiner ask patients if they engaged in voluntary sexual intercourse within several days prior to or after the assault. If so, patients are then asked the date of the contact in order to help determine the possible significance of semen remaining from such activity.

Very often, the date of last consensual sexual activity is asked during the physical examination. Knowing who the prior sexual contact was is significant only to the extent that saliva and blood samples from the individual involved can be made available for comparison if needed. **Therefore, this person's identity is not relevant either to the medical examination or for the initial findings of the crime laboratory and should not be sought at time of initial examination.**

Many factors can influence the interpretation of the scientific findings. Semen can remain in the vagina and cervix from several hours to several days, and for shorter periods of time in the rectum. Although the majority of sexual assault cases involve detectable semen lasting up to 72 hours, the disappearance of semen from the vaginal or rectal orifice usually is gradual, not sudden. The amount of residual semen can be extremely variable, depending on the patient's own physiology, any cleansing activities following sexual activity, the original volume of semen, the effectiveness of the medical collection procedure, and the sensitivity of the analytical method employed by the crime laboratory. If the patient has had recent consensual sexual activity, then the ejaculate of that sexual partner could be present on the specimen and not necessarily be that of the assailant. In order to interpret the results correctly (to avoid falsely excluding the assailant as the donor of the semen or falsely including an innocent party), correct interpretation of analytical results requires knowing all those persons who could have contributed to the sample.

The recollections of the patient may become less accurate if they go unsolicited until after the crime laboratory identifies discrepancies between the assailant's known DNA type and the DNA type of the seminal stains. In some jurisdictions, several months may elapse between the initial medical examination, the crime laboratory analysis, and the follow-up interview with the prosecutor and victim.

**STEP 4: BLOOD/URINE TOXICOLOGY SAMPLES ENVELOPE**
(COLLECT ONLY IF DRUG FACILITATED SEXUAL ASSAULT IS SUSPECTED – DO NOT COLLECT IN ALL CASES.)

Note: In order to minimize patient discomfort, blood needed for other tests, including pregnancy, should be drawn at this time. **THESE TEST RESULTS SHOULD NOT BE INCLUDED IN THE KIT, BUT SHOULD REMAIN AT THE HOSPITAL.** All blood tubes and urine collection cups should be taken from the hospital supply

**Suspected Drug Facilitated Sexual Assault**

Unknown drug ingestion has become a common tool of sex offenders to aid in the commission of their crimes. Commonly used drugs include Ketamine, Rohypnol, Gamma Hydroxybutyrate (GHB), Ecstasy and a variety of prescription medications. These drugs are often mixed with
alcohol or other beverages to incapacitate the victim. Once the victim recovers from the effects of the drug, anterograde amnesia may make it difficult to recall the events following the ingestion of the drug. For this reason, sexual assault victims may not be aware of the assault or whether or how they were drugged. See Appendix E for additional resources related to drug facilitated sexual assault.

The examiner should be aware of the possibility of unknown drug ingestion and discuss the possibility with the patient. Ask the patient to describe any symptoms that may indicate the use of a drug and offer to test for the drug’s presence in the body. It is important for the examiner to realize that their hospital-based laboratory may be limited in its ability to test for specific substances. Appendix J provides some web-based resources the examiner may find helpful.

On October 12, 1996, a federal law entitled “The Drug-Induced Rape Prevention and Punishment Act of 1996” was enacted. The bill provides penalties of up to 20 years imprisonment for persons who intend to commit a crime of violence by distributing a controlled substance to another individual without that individual’s knowledge.

Testing for the Presence of Drugs Used to Facilitate Sexual Assault

If the patient presents with drowsiness, memory loss, impaired motor skills, etc. or there is a suspicion of unknown drug ingestion, the patient should be asked for consent to have a blood and/or urine sample collected for identification of drugs commonly used to facilitate sexual assault.

If the patient consents to the testing, the following procedures should be followed:

1. If ingestion was within 48 hours, collect both blood and urine samples.
2. If ingestion was between 48 and 72 hours, collect a urine sample only.
3. If ingestion was over 72 hours, neither sample should be collected.

Blood Sample

Except in pre-pubertal cases, if the ingestion occurred within 48 hours, collect a 10 milliliter sample of liquid blood into a hospital supplied Purple Top (EDTA) tube, using normal blood drawing procedures. For reported cases, label tube with: Patient’s name, DOB, phlebotomist’s initials, date and time. For anonymous cases, label with: Kit #, DOB, phlebotomist’s initials, date and time. Place blood tube in bubble wrap and into envelope. Seal and fill out all information as requested (STEP 4).

Urine Sample

In addition to blood, if the ingestion occurred within 72 hours, collect a 100 ml urine sample in hospital-supplied urine sample container. For reported cases, label with: Patient’s name, DOB, collector’s initials, date and time. For anonymous cases, label with: Kit #, DOB, collector’s initials, date and time. Place urine container in a liquid tight re-sealable plastic bio-hazard bag and leave outside the kit for law enforcement personnel. Refrigerate urine sample to prevent sample degradation. If transport of specimen to the crime lab is to exceed one hour, freeze the urine specimen. DO NOT PLACE URINE SAMPLE IN THE SEXUAL
ASSAULT EVIDENCE COLLECTION KIT. No toxicology testing will be performed on samples collected anonymously until such incidents are reported.

NOTE: IF BLOOD/URINE SAMPLE IS TAKEN ASK PATIENT IF S/HE IS ON ANY PRESCRIPTION DRUGS AND DOCUMENT DRUGS ON ENVELOPE.

STEP 5: OUTER CLOTHING and STEP 6: UNDERPANTS

Clothing frequently contains the most important evidence in a case of sexual assault. The reasons for this are two-fold:

- Clothing provides a surface upon which traces of foreign matter may be found, such as the assailant's semen, saliva, blood, hairs, and fibers, as well as debris from the crime scene. While foreign matter can be washed off or worn off the body of the patient, the same substances often can be found intact on clothing for a considerable length of time following the assault.

- Damaged or torn clothing may be significant. It may be evidence of force and can also provide laboratory standards for comparing trace evidence from the clothing of the patient with trace evidence collected from the suspect and/or the crime scene.

The most common items of clothing collected from patients and submitted to crime laboratories for analysis are underpants, hosiery, blouses, shirts, and slacks. There are also instances when coats and even shoes must be collected. **These items should only be taken if the patient wore them at the time of the assault and they likely contain evidence in the case.**

**A patient’s eyeglasses, wallet, cash and credit cards should not be taken. A patient’s jewelry should not be taken.** If the examiner believes material has been transferred from the assailant onto the victim’s jewelry, the jewelry should be swabbed using sterile water and swabs, and packaged appropriately as part of the evidence collection kit.

In the process of criminal activity, different garments may have contact with different surfaces and debris from both the crime scene and the assailant. Keeping garments separate from one another permits the forensic scientist to reach certain pertinent conclusions regarding reconstruction of criminal actions. **Therefore, each garment should be placed separately in its own paper bag to prevent cross-contamination.**

When the determination has been made that the victim’s clothing contains possible evidence related to the assault, **with patient consent**, those items should be collected. The patient has the right to refuse to turn over any article of clothing. If the patient is seen within 5 days of the sexual assault the underpants worn by the victim should be collected.

If it is determined that the patient is not wearing the same clothing, the examiner should inquire as to the location of the original clothing. This information should be given to the investigating officer so that he or she can make arrangements to retrieve the clothing before any potential evidence is destroyed.

The patient may be wearing a sanitary napkin at the time of the exam. In this instance the underpants need not be collected. Instead, the napkin should be collected as evidence by drying
and folding the napkin in on itself, inserting the napkin into the underpants collection bag, and labeling and sealing the bag accordingly.

**Clothing Collection Procedure**

The clothing should then be collected and packaged in accordance with the following procedures:

After air-drying items when necessary, such as underpants, hosiery, slips, or bras, they should be put into individual small paper bags. Any wet stains, such as blood or semen, should be allowed to air dry before being placed into paper bags. It is preferable that each piece of clothing be folded inward, placing a piece of paper against any stain, so that the stains are not in contact with the bag or other parts of the clothing.

If, after air drying as much as possible, moisture is still present on the clothing and might leak through the paper bag, the labeled and sealed clothing bags should be placed inside a larger plastic bag with the top of the plastic bag left open. In these instances, a label should be affixed to the outside of the plastic bag, which will alert law enforcement that wet evidence is present inside the plastic bag. This will enable law enforcement to remove the clothing and avoid loss of evidence due to putrefaction.

It is important to remember that sanitary napkins, tampons, and infant diapers may also be valuable as evidence because they may contain semen or pubic hairs from the perpetrator. Items such as slacks, dresses, blouses, or shirts should be put into larger paper bags. If additional clothing bags are required, use only new paper bags. Additional bags may also be obtained from law enforcement.

**STEP 7: ORAL SWABS AND SMEAR**

In cases where the patient was forced to perform oral sex, the oral swabs and smear can be as important as the vaginal or rectal samples. The purpose of this procedure is to recover seminal fluid from recesses in the oral cavity where traces of semen could survive.

If the sexual assault occurred within 24 hours of the patient’s presentation, swab the oral cavity using the two swabs provided, either individually or together. Attention should be paid to those areas of the mouth, such as between the upper and lower lip and gum, where semen might remain for the longest amount of time. Prepare the oral smear by wiping both swabs across the surface of the labeled glass slide. **The smear should not be fixed or stained.** Allow oral swabs and smear to air dry. Return smear to slide holder and place the swabs in the swab box. Return slide holder and swab box to the Oral Swabs and Smear envelope (Step 7). Seal and fill out all information requested on envelope.

**Swab and Smear Collection Procedure**

The purpose of making smears is to provide the forensic analyst with a nondestructive method of identifying semen. This is accomplished through the identification of the presence of spermatozoa. If no spermatozoa are present, the analyst will then proceed to use the swabs to identify the seminal plasma components to confirm the presence of semen.
If patients must use bathroom facilities prior to the collection of these specimens, they should be cautioned that semen or other evidence may be present in their pubic, genital and anal areas and to take special care not to wash or wipe away those secretions until after the evidence has been collected.

The number of tests that lab personnel can perform is limited by the quantity of semen or other fluids collected; therefore, two swabs should be used when collecting specimens from the oral, anal and rectal cavities. All four swabs should be used either individually or in pairs when collecting specimens from the vaginal cavity.

When taking swabs, the examiner should take special care not to contaminate the individual collections with secretions or matter from other areas, such as vaginal to rectal or penile to rectal. Such contamination may unnecessarily jeopardize future court proceedings.

Depending upon the type of sexual assault, semen may be detected in the mouth, vagina, anus or rectum. However, embarrassment, trauma, or a lack of understanding of the nature of the assault may cause a patient to be vague or mistaken about the type of sexual contact that actually occurred. For these reasons, and because there may also be leakage of semen from the vagina or penis onto the anus, even without rectal penetration, it is recommended that the patient be encouraged to allow examination and collection of specimens from both the vagina and anus.

In cases where a victim is certain that contact or penetration involved only one or two orifices (or in some circumstances, no orifices at all), it is important for the victim to be able to refuse these additional tests. This "right of refusal" also will serve to reinforce a primary therapeutic principle - that of returning control to the victim.

Each of the oral, vaginal/penile and anal collection envelopes contains the applicable slide with which to create the smear. When swabs are collected from each of these orifices, the first two swabs collected should be utilized to make the appropriate smear by placing the cotton end of the collected swab in the center of the slide and smearing the center of that slide with the collected specimen. Care should be taken to be sure the correct side of the slide is used to make the smear. The correct side of the slide is indicated by the label marked “oral” or “vaginal/penile” or “rectal.” The smear should not be fixed or stained.

STEP 8: DNA SAMPLE/BUCCAL SWABS

In some instances of sexual assault, dried deposits of blood, semen, or saliva may be found at the crime scene or on the body or clothing of either the patient or suspect. The purpose of collecting DNA Sample/Buccal Swabs is to determine the patient's DNA profile for comparison with such deposits.

Swab the inner aspects of both cheeks with both swabs until moistened. Allow both swabs to dry. Place swabs in box. Return swabs to the DNA Sample/Buccal Swabs envelope. Seal and fill out all information requested on envelope.

NOTE: DNA/BUCCAL SWABS SHOULD BE TAKEN FOR ALL PATIENTS, INCLUDING PREPUBESCENT
STEP 9: FOREIGN MATERIALS/PUBLIC COMBINGS COLLECTION

Semen and saliva are the most common secretions deposited on the patient by the assailant, which can be analyzed by laboratories to aid in the identification of the perpetrator. It is important that the examiner examine the patient's body for evidence of foreign matter.

If secretions, such as saliva, seminal fluid and dried blood, are observed or suspected on other parts of the patient's body during the examination, the material should be collected using a swab. A different swab should be used for every secretion collected from each location on the body.

Oral contact with the victim’s breast or genitalia is common. It is important to ask the patient directly if and where the assailant put his/her mouth, or where the suspect ejaculated on the patient’s body. If the patient reports that the assailant puts his or her mouth on their body anywhere and/or ejaculated on the patient’s body and they are still within 5 days of the assault, a specimen should be collected.

Dried secretions are collected by dampening the swab with sterile water and gently swabbing the indicated area. After allowing the swab to air dry, it should be returned to the swab box provided. The Foreign Material/Public Combings Collection (Step 9) envelope should be marked as to where on the patient’s body the sample was collected and what substance is suspected (e.g. blood, semen, saliva, etc.). In the event multiple sites require collection, the examiner should obtain additional swabs and envelopes from the hospital supply and label accordingly.

**Pubic Hair Collection Procedure**

Due to the advent of DNA analysis, pulled pubic hairs are no longer necessary under any circumstances.

The pubic hair combings and the comb are placed in the Foreign Materials/Public Combings envelope (Step 9). After the labeling information is completed, the envelope should be sealed. Combing should be done vigorously and thoroughly to lessen the chance that valuable evidence may be missed.

Where there is evidence of semen or other matted material on pubic or head hair, it may be collected in the same manner as other dried fluids. The swab should be placed in a small paper envelope and labeled "possible secretion sample from head/pubic hair." Although this specimen may also be collected by cutting off the matted material, it is important to obtain the patient's permission before cutting any amount of hair.

STEP 10: ANAL SWABS AND SMEAR

If the circumstances of the assault suggest contact between the victim’s anus and the assailant’s mouth and/or penis, or if there is suspected drainage from the vagina onto the anus, even without anal penetration, it is recommended that the patient be encouraged to allow examination and collection of anal swabs.

**If the sexual assault took place within 48 hours of the patient’s presentation,** and after fully explaining the procedure to the patient, put the patient in either supine or prone knee-chest position, and apply gentle bilateral pressure with the examiner’s hands to the patient’s buttocks. Allow approximately 2 minutes for anal dilation to occur. Swab the anal cavity using the two
swabs provided, either individually or together. To minimize patient discomfort, these swabs may be moistened slightly with sterile water. Prepare the anal smear by wiping both swabs across the top, labeled surface of the microscope slide. The smear should not be fixed or stained. Allow all swabs and smear to air dry. Return smear to slide holder and place both swabs in the swab box. Return slide holder and swab box to the Rectal Swabs and Smear envelope. Seal and fill out all information requested on envelope.

At this time, any additional examinations or tests involving the anus should be conducted.

**STEP 11: EXTERNAL GENITALIA/PENILE SWABS**

**EXTERNAL GENITALIA**

If the circumstances of the assault suggest there has been contact between the victim’s genitalia and the assailant’s mouth or penis **within 72 hours of the examination**, and the patient has not bathed or showered since the assault, there exists the possibility that saliva or seminal fluid may be found on the patient’s external genitalia. In this instance, the two cotton tipped swabs in the envelope should be moistened slightly with sterile water and the entire pubic area should be swabbed gently, the swabs dried and packaged appropriately.

**PENILE SWABS**

For the male patient, both adult and child, the presence of saliva on the penis could indicate that oral-genital contact was made; the presence of vaginal secretions could help corroborate that the penis was introduced into a vaginal orifice; and feces or lubricants might be found if rectal penetration occurred.

If the assault took place **within 72 hours of the exam** and if the male patient has not bathed or showered, the proper method of swabbing the penis is to slightly moisten the swabs provided, with sterile water, and thoroughly swab the external surfaces of the penile shaft and glans. The swabs may be used two at a time. All outer areas of the penis and scrotum where contact is suspected should be swabbed. Allow all swabs to air dry. Place both swabs in the swab box. Return swab box to the Penile Swabs envelope. Seal and fill out all information requested on envelope. Care should be taken to avoid the urethral meatus as this could result in obtaining a DNA sample of the victim instead of the perpetrator.

Any other applicable hospital testing should be done at this time.

**EVALUATION FOR GENITAL TRAUMA**

It is important to note that the majority of sexual assault cases do not involve genital trauma. However, recognition and documentation of trauma can both corroborate the patient’s statements and show the level of force used in the commission of the crime. Visual inspection is the most common and available examination technique to detect genital trauma. Careful, inspection of the ano-genital region is essential. Traumatic injury may include tears, bruising, abrasions, and abnormal redness. The areas where these types of injuries are often found include the posterior fourchette, fossa navicularis, labia minora and the hymen. Not all injuries are easily seen.

There are times when the barrier to care may involve a cultural practice that the provider is unaware of, and may complicate the overall care of the patient, such as **female genital**
mutilation (FGM). In this instance it is critically important that the provider be educated in the cultural practice, origins, sexual assault care and appropriate follow ups. (For more information go the World Health Organization website at www.who.int/en/)

A few techniques have been studied that enhance the examiner’s ability to recognize and/or enhance possible identified areas of genital injuries. Availability of equipment and skilled examiners limits the application of these techniques but they should be considered appropriate options:

The Foley Catheter Technique

The foley technique is utilized on female patients who have reached the onset of their menses to visualize the hymen and better detect injury. A foley (12-16F) with balloon is inserted into the vaginal vault, without lubrication, following visualization and prior to the speculum examination. The foley is inserted until the balloon tip is inside the vaginal vault. The balloon is then inflated with air using a 30-60cc syringe. The balloon on average is inflated with approximately 30-50cc of air. The foley is then gently tugged on allowing the hymenal tissue to sit on the descending balloon. Should injuries to the hymen be found, appropriate photographic techniques should be employed.

To avoid loss of evidence, the foley tip can be swabbed, and the swab dried, labeled and sent to the crime lab with the other evidence for analysis.

Toluidine Blue Dye

1% Toluidine blue dye has been employed as an objective adjunct in the evaluation of ano-genital trauma because of its sensitivity for exposed dermal nuclei. Trauma can injure the epidermis and expose the nuclei of cells. Normal intact skin contains no nuclei on its surface. Toluidine blue dye is only applied to the posterior fourchette, fossa navicularis and external tissue such as the perianal folds with subsequent removal by means of a destaining reagent, such as lubricant jelly (K-Y), diluted acetic acid or a 10% vinegar solution. While the dye has been shown to increase the detection rate of micro abrasions and lacerations by up to 58% in sexual assault patients, it should be used only to highlight injury that has already been identified and is not necessary in every case. Studies also indicate that it does not interfere with molecular techniques used in forensic medicine.

Some references that may be helpful to the examiner:

STEP 12: VAGINAL/CERVICAL SWABS AND SMEAR

Vaginal/cervical swabs and smears should be taken if the assault occurred within 5 days of the patient’s examination and should not be collected from prepubertal patients.

When collecting the vaginal specimens, it is important not to aspirate the vaginal orifice or to dilute the secretions in any way.

Utilizing a speculum in the patient who has reached the onset of menses, swab the vaginal vault using two of the four swabs provided, either one at a time or as a pair. Prepare the vaginal smear by wiping one pair of swabs across the top, labeled surface of the microscope slide. The smear should not be fixed or stained. Use the second set of swabs one at a time to gently swab the cervical os of the patient. Allow all swabs and smear to air dry. Return smear to slide holder and place each pair of swabs in their respective swab boxes, marking them appropriately “vaginal” or “cervical”. Return slide holder and swab boxes to the Vaginal Swabs and Smear envelope. Seal and fill out all information requested on envelope.

DO NOT COLLECT FROM PREPUBERTAL PATIENTS. In the pre-menses girl no speculum is utilized during the exam, and the set of cervical swabs is not obtained. The remaining two vaginal swabs should be moistened slightly with sterile water and used to swab the introitus.

Immediately following this procedure, the remainder of the pelvic examination should be performed and appropriate medical intervention and treatment should occur.

Collection of Tampons as Evidence

The sexual assault examiner may find that the patient has inserted a tampon in response to menstruation. The tampon may have absorbed residual semen from the assailant. It will therefore be necessary to collect the tampon as evidence. Obtain a sterile urine specimen collection container from hospital supply. Label the container with the name of the patient, date, time and collector's initials. Punch three or four air holes through the cover of the container. Carefully remove the tampon from the patient's vaginal cavity, or ask the patient to remove the tampon, and place it in the urine specimen container. Cover the specimen container and place it into a paper bag. Label the bag with the name of the patient, date, time and collector's initials. Seal the paper bag with tape and keep it separate from the Evidence Collection Kit. Do not attempt to secure the tampon and packaging in the Evidence Collection Kit box.

STEP 13: MEDICAL/FORENSIC EXAMINATION FORM

Findings from the medical/forensic examination should be documented as completely as possible on the forms provided, which will become part of the patient’s medical record. Sexual assault prosecutions may not always require the presence or testimony of the attending examiner; however, there will be times when it is necessary. If testimony is needed, a thoroughly completed and legible medical record and accompanying body diagram and/or photographs will assist medical staff in recalling the incident.

When gathering information necessary to perform the medical/forensic examination the examiner should focus on statements made by the patient as they relate to the assault and any
anticipated evidence collection and treatment that will be required, as well as observations made during the examination. Drawing unfounded conclusions should be avoided.

**EVALUATION FOR SEXUALLY TRANSMITTED INFECTIONS (STIs)**

According to the latest *Centers for Disease Control STD Treatment Guidelines*, Trichomoniasis, Bacterial Vaginosis, gonorrhea and chlamydial infection are the most frequently diagnosed infections affecting women who have been sexually assaulted. Because the prevalence of these infections is high among sexually active women, their presence post-assault does not necessarily signify acquisition during the assault. Chlamydial and gonococcal infections among females are of special concern because of the possibility of ascending infection. In addition, post-assault evaluation can detect the Hepatitis B Virus, which may be prevented by post-exposure administration of the Hepatitis B vaccine. It is recommended that the most recently published *CDC STD Treatment Guidelines* be adhered to whenever possible. ([www.cdc.gov](http://www.cdc.gov))

**Prophylaxis**

Knowing that follow up can be difficult, the CDC provides specific prophylactic recommendations. Because these recommendations are routinely updated as a result of new science, providers should follow the most up to date treatment guidelines found at the CDC website: [http://www.cdc.gov/std/treatment/default.htm](http://www.cdc.gov/std/treatment/default.htm)

**Risk for Acquiring HIV and non-occupational Postexposure Prophylaxis (nPEP)**

The decision to recommend post-exposure prophylaxis (PEP) must balance the risks and benefits of PEP. The risks are primarily of an adverse drug reaction (ADR). The benefit is the potential prevention of HIV acquisition. The decision analysis required to balance the two is made difficult by the low risk of transmission after a single sexual exposure to HIV, the unknown efficacy of PEP after sexual exposure, and the potential toxicity of the medications. The risk of transmission is highest after unprotected receptive penile-anal sexual exposure (0.1-3%), less after receptive penile-vaginal exposure (0.1-0.2%), and much less after receptive oral exposure (risk not defined).

There are no available data to estimate the efficacy of PEP after sexual exposure. Theoretical support is also provided by the efficacy of PEP after occupational exposure and by the efficacy of antiretroviral therapy (ART) for the prevention of transmission from mother to child during pregnancy. Studies of PEP administered to health care workers after occupational exposure have documented a high rate of adverse drug reactions (ADRs). In some studies, as many as 50-90% of those who received PEP reported subjective side effects, and as many as 24-36% reported side effects severe enough to discontinue therapy. The newer agents which are now often recommended for PEP are better tolerated, but the risk of ADRs remains.

In keeping with the CDC guidelines, New Hampshire makes the following recommendations for post-exposure assessment of adolescent and adult patients **within 72 hours** of the sexual assault:

2. Evaluate circumstances of assault that may affect risk for HIV transmission.
3. Consult with a specialist in HIV (Infectious Disease) treatment if post-exposure prophylaxis is considered.

4. If the patient appears to be at risk for HIV transmission from the assault, discuss antiretroviral prophylaxis, including toxicity and unknown efficacy, testing and follow up recommendations.

5. If the patient chooses to receive antiretroviral post-exposure prophylaxis, follow the recommended algorithm in Appendix K.

6. The patient should be given a minimum of a 7-day dose, with the first dose to be taken immediately. The remainder of the 28-day dosage must be made available to the patient as soon as possible, at no cost to the patient. See Appendix L for the medication guidelines.

NOTE: The State of New Hampshire Board of Pharmacy, at their August 16, 2006 meeting, (see http://www.nh.gov/pharmacy/aboutus/documents/min200608.pdf for meeting minutes) voted to waive rule 709.07 that limits emergency rooms from dispensing more than a 3 day dose of medications, and allow dispensing the full 28 day dose pack of this medication in this circumstance. The hospital will be reimbursed for the cost of the medication by the New Hampshire Attorney General’s Office. See payment for HIVnPEP on page 43.

If HIVnPEP is prescribed to the patient, the following steps should be taken:

1. Dispense a minimum of a 7-day dose with the first dose taken immediately.

2. Give the patient a copy of the HIVnPEP Patient Information Form which is included in the protocol (See Appendix M).

3. Despite the fact that scheduling and adhering to follow up may be difficult in this patient population, it remains essential in order to detect new infection, document healing of injury, counsel regarding treatment for other STIs or complete requested vaccinations. For these reasons the most recent CDC recommendations regarding follow up and post exposure prophylaxis should be adhered to whenever possible. The CDC guidelines can be found at www.cdc.gov.

Provide the patient with information regarding the necessary follow-up testing and counseling the patient’s Primary Care Provider, an Infectious Disease doctor, or another appropriate clinician. If possible, facilitate the scheduling of the follow-up. The State will pay for one follow-up visit, at the Fee for Service Medicaid Rate. See page 43, for payment instructions and Appendix O for the follow-up voucher form.

4. The clinician should facilitate a follow-up phone call within 3 days, to check in with the patient regarding the status of their follow-up care.

5. Provide the remainder of the 28-day dosage to the patient, at no cost to the patient.

The patient should be offered HIV counseling as soon as possible by a trained counselor in order to realize that the possibility of contracting HIV is outweighed by the probability that a
single exposure will not transmit the infection. All persons electing to be tested for HIV should receive pretest and posttest counseling.

**EVALUATION FOR PREGNANCY AND PREVENTION**

Since the incidence of pregnancy after one unprotected mid cycle intercourse is between 1 and 17%, the possibility of pregnancy should be downplayed to decrease the patient’s anxiety. However, patients who have experienced a sexual assault that could result in an unintended pregnancy should not experience barriers to accessing Emergency Contraception (EC).

The National Protocol recommends that health care providers discuss the probability of pregnancy with female patients, administer a pregnancy test for all patients with reproductive capability and discuss treatment options.

All victims must be offered emergency medical treatment. Offering counseling to female victims about pregnancy prevention and the importance of timely action is also necessary.

There are two available oral emergency contraceptives that can be offer to sexual assault patients:

- Levonorgestrel tablets
- Ulipristal acetate tablets

It is important that providers access the most up-to-date pharmacological information on these options prior to giving them. This can be achieved through pharmacy department or online medical/pharmacological resources. Optimally, treatment should be initiated as soon as possible after the assault.

**Health care facilities or physicians that do not offer these services or choose not to provide emergency contraception as a treatment option following the completion of a medical/forensic examination for victims of sexual assault must immediately provide the victim a referral to another facility that does provide this treatment option.** The type and dosage of any medication administered or prescribed and any referral arrangements must be recorded in the medical chart and also be provided to the victim.

**Sources:**

**PHOTOGRAPHS**

Photographs are an important adjunct to the narrative information contained in the medical/forensic exam. Photographs serve to visually document the actual physical appearance of an injury to preserve it for additional analysis (i.e., a bite mark) and/or for presentation as evidence. For photographs to be admissible in court, they must first be authenticated. Someone
who personally observed the patient’s injuries must be able to testify that the photograph fairly and accurately depicts the actual appearance of the injury at the time the photograph was taken.

**Photographs may only be taken with the written consent of the patient.** Photographs should not be taken in the place of diagrams or written descriptions, and should be taken by the examiner. Only in cases where the examiner is unable to take photographs should other medical or law enforcement personnel who are trained to take photographs of injuries, be called in. **In addition, photographs taken in the context of the medical/forensic examination become part of the medical record.** Examiners should adhere to their institution’s photography policy for proper disposition of photographs. **Photographs should not be placed in the evidence kit.** The existence of photographs should be noted on the Medical/Forensic Examination Form (Step 13).

Blank anatomical diagrams, which are provided in the kit, should be used to show the location and size of all visible injuries and should also be accompanied by a detailed written description of the trauma, including measurements of the injuries.

When photographs are taken, make sure to:

- Take a photograph of the injury with and without a color/measure standard, preferably the ABFO #2 (American Board of Forensic Odontology).
- Adhere to institutional policy for specific labeling and disposition of photographs taken. If no policy exists, label each photograph with the patient’s name, DOB, Medical Record Number, date and time of photograph, and signature of photographer. In instances where close-up photography is used, indicate the area of injury on the patient’s body.
- Indicate on the body diagrams contained on Step 13 where the photographed injury is located and give a written description of the injury including size in the medical/forensic record.
- Do not take genital photography without at minimum a digital zoom capability, or a colposcope or its equivalent.
- **Re-photograph injuries when appropriate.** This will help to show the extent of the injuries, their severity and their healing over time.

**Order of Photographs:**

- Photo #1: A patient sticker or bracelet identifier photograph
- Photo #2: Head-to-Toe Identifier photograph of the patient
- Photograph series of each identified injury:
  - Long distance photograph of injury
  - Close up photograph of injury
  - Close up photograph of the injury utilizing a measuring tool
• Last Photograph: A patient sticker or bracelet identifier photograph

*Bite Mark Procedure*

Bite marks may be found on patients as a result of sexual assault and other violent crime, and should not be overlooked as important evidence. Saliva, like semen, may demonstrate the DNA profile of the individual from whom it originated. Bite mark impressions can be compared with the teeth of a suspect and can sometimes become as important for identification purposes, as fingerprint evidence. The collection of saliva and the taking of a photograph of the affected area are the minimum procedures that should be followed in cases where a bite mark is present, or believed to be present.

The collection of saliva from the bite mark should be made prior to the cleansing or dressing of any wound. If the skin is broken, swabbing of the actual punctures should be avoided when collecting dried saliva.

It is important that photographs of bite marks be taken properly. An individual, deemed appropriate for the situation and who has sufficient photography skills, should be contacted immediately to take photographs of bite mark evidence utilizing an ABFO #2 standard.

Whenever possible, a dentist or a forensic odontologist should be called in to examine the bite mark and further document findings. Hospitals should contact the New Hampshire Office of the Chief Medical Examiner for a referral in locating a qualified dentist or forensic odontologist who can assist in this process. During normal business hours, call the office directly at (603) 271-1235. After hours, call New Hampshire State Police Headquarters at (603) 271-3636 for assistance in reaching the Medical Examiner.

If the bite mark occurred within 5 days of the exam, saliva is collected from the bite mark area by moistening a sterile swab with a minimum of sterile water and gently swabbing the affected area, following the same procedures as instructed for other dried fluids.

**STEP 14: PATIENT INFORMATION FORM**

The discussion of follow up services for both medical/forensic and counseling purposes is an important treatment aspect for sexual assault victims. Before the patient leaves the hospital, a Patient Information Form should be completed. The type and dosage of any medication prescribed or administered should be recorded on the first portion of this form.

The original copy of the patient information form should be given to the patient and the second copy retained for the hospital's records.

**STEP 14A: HIV PROPHYLAXIS (HIV n PEP) PATIENT INFORMATION SHEET**

If HIV PEP was given to the patient, fill out all information requested on the HIV Prophylaxis (HIV n PEP) Information Form, then have Patient/Parent/Guardian sign on bottom of form and the form should be given to the patient.
STEP 15: GIVE THE PATIENT THE FOLLOWING FORMS

A. FOLLOW UP EXAMINATION VOUCHER FORM  
B. SEXUAL ASSAULT CRISIS CENTER LIST  
C. FINANCIAL AID FOR VICTIMS CARD

STEP 16: POST CARD MAILING

Every evidence collection kit contains a self-addressed, postage paid postcard. The examiner is required to document the date of examination, the receiving police department, the serial number (do NOT use the patient’s name) on the kit used for the exam, whether it was reported or anonymous, the examiner’s name and whether that individual is a SANE. The post card should then be put into the nearest mail system. The information contained on the card is being obtained for statistical purposes and IT IS VERY IMPORTANT THAT A POST CARD IS MAILED FOR EVERY KIT USED.

RELEASE OF EVIDENCE

All medical and forensic specimens collected during the sexual assault examination must be kept separate, both in terms of collection and processing. Those required only for medical purposes should be kept and processed at the examining hospital, and those required strictly for forensic analysis transferred with the evidence collection kit to the crime laboratory for analysis. When all evidence specimens have been collected, they should be placed back into the kit, making certain that everything is properly labeled and sealed. All unused envelopes should also be returned to the kit.

Under no circumstances should the patient be allowed to handle evidence after it has been collected. Only a law enforcement official or duly authorized agent should transfer physical evidence from the hospital to the crime laboratory for analysis.

Evidence collection items should not be released from a hospital without the written authorization and consent of the informed adult patient, or an authorized third party acting on the patient's behalf, if the patient is unable to understand or execute the release. Step 1 in the medical/forensic kit entitled, "Authorization for Collection and Release/Transfer of Evidence and Use/Disclosure of Protected Health Information Form", should be completed, making certain that all items being transferred are checked off. Signatures must also be obtained on the Chain of Custody Form on the front of the evidence collection kit from the examiner turning over the evidence, as well as from the law enforcement representative who picks up the evidence and transports it to the New Hampshire State Forensic Lab.

One copy of Step 1, "Authorization for Collection and Release/Transfer of Evidence and Use/Disclosure of Protected Health Information Form", should be kept at the hospital and the other copy returned to the kit.

All required information should then be filled out on the top of the kit just prior to sealing it with the provided red evidence tape at the indicated areas, to indicate proper chain of custody. Initial the evidence tape after sealing. The completed kit and clothing bags should be kept together and stored in a safe area. Paper bags are to be placed next to, but not inside, the completed kit.
Although the vast majority of sexual assault victims consent to have their evidence specimens released to law enforcement subsequent to the medical examination and evidence collection process; there may be instances when a patient will not authorize such a release. If consent is not initially received, an Anonymous Sexual Assault Reporting System is in place. All forms, as well as the kit box and clothing bags should be marked with the evidence collection kit serial number found on the end of the kit box, instead of the patient’s name. (See Reporting Anonymously, Page 16)
DISCHARGE OF THE PATIENT

COUNSELING

Since sexual assault is a violent crime, patients are often left feeling vulnerable, helpless, anxious, or phobic. Long-term counseling as well as short-term crisis intervention with a therapist or support organization may be needed to help the patient regain equilibrium.

Sexual Assault Crisis Centers offer peer support regarding the signs and symptoms of Rape Trauma Syndrome or Post Traumatic Stress Disorder and will also make referrals to a therapist upon request. The local crisis center should always be notified, and the list of crisis centers found inside the evidence collection kit should always be given to the patient. The examiner should determine whether immediate psychiatric consultation is necessary.

FOLLOW UP CONTACT

Any further contact with sexual assault victims must be carried out in a very discreet manner. In an effort to avoid any breach of confidentiality or unnecessary embarrassment, patients should be asked before leaving the hospital whether they may be contacted about follow up services. If the patient agrees they should be asked to provide an appropriate mailing address and/or telephone number where they can be reached.

Informational brochures on sexual assault and its aftermath are available from most sexual assault crisis centers. A copy should be provided to all victims and their families before they leave the hospital.

CHANGE OF CLOTHING

Many patients would like to wash after the examination and evidence collection process. If possible, the hospital should provide the basics required, such as mouth rinse, soap, and a towel.

If garments have been collected for evidence purposes and no additional clothing is available, arrangements should be made to ensure that no patient has to leave the hospital in an examining gown. Some patients may wish to have a family member or friend contacted to provide substitute clothing. When the patient has no available personal clothing, necessary items may be supplied by hospital volunteer organizations and/or local victim assistance agencies. Some crisis centers supply sweat suits for this purpose. The hospital should contact their local crisis center to arrange for clothing to be available.

TRANSPORTATION

Transportation should be arranged when the patient is ready to leave the hospital. In some cases, this will be provided by a family member, friend, or victim advocate who may have been called to the hospital for support. In other cases, transportation may be provided by the local police department as a community service.
PAYMENT FOR MEDICAL/FORENSIC EXMANINATION/HIVnPEP PROPHYLAXIS BILLING/FOLLOW UP VISIT

It is the intent of the New Hampshire Attorney General’s Office to provide financial assistance to a victim of sexual assault and, on behalf of the victim, provide payment for the cost of the examination and follow-up care associated with a sexual assault.

These expenses may include the following:

1. The sexual assault medical/forensic examination and evidence collection kit.
2. Medications for prophylaxis, including HIV prophylaxis, pregnancy prevention and STIs.
3. A follow-up medical visit in accordance with clinical guidelines.
4. If started on HIV PEP, a second medical follow up visit with infectious diseases.

In addition to the examination process, the licensed examiner must discuss the billing process with the patient and complete the attached billing form for every patient who receives a forensic sexual assault examination (FSAE). ON EVERY PATIENT, A NEW HAMPSHIRE BILLING EXEMPTION FORM MUST BE FILLED OUT, please find the billing exemption form on page 63 of this protocol.

NOTE: The State of New Hampshire Victims’ Compensation Program is responsible for the payment of medical/forensic sexual assault examinations not covered by medical insurance or other third party payment when the examination is conducted for purposes that include collecting evidence.

The following guidelines should be used in regard to hospital billing:

1. The patient should NEVER be billed for the Medical/Forensic Sexual Assault Examination.

2. In Anonymous Reporting cases, all bills, regardless of whether or not the patient has Medicaid or private health insurance, should be sent directly to the Attorney General’s Office, Victims’ Compensation Program for payment. The patient’s insurance should not be billed under any circumstances if the kit was completed anonymously.

3. If the patient has health insurance and chooses to bill their insurance, then insurance information should be obtained by appropriate hospital personnel, and the insurance company should be billed directly for the cost of the examination. The patient and Victims’ Compensation should not be billed for anything above the insurance coverage limit.

4. If the patient indicates that she or he does not want their insurance billed for the examination or HIVnPEP medication, the examining facility will forward all charges related to the medical/forensic examination to the Attorney General’s Office, Victims’ Compensation Program.
5. If the patient has no insurance, the Victims’ Compensation Program should be billed directly.

6. If the patient is covered by Medicaid/Medicare, and it is not an anonymous reporting kit, then all bills must be sent to Medicaid/Medicare for payment. The patient and Victims’ Compensation should not be billed for anything above the coverage limit.

PAYMENT FOR HIVnPEP

The State of New Hampshire has determined that it will be responsible for the cost of HIVnPEP at the Fee for Service Medicaid Rate, when it is recommended for a patient following an acute sexual assault, and when the patient has no medical insurance. See Appendix N for HIVnPEP payment guidelines.

Because payment for these medications will come from the New Hampshire Victims’ Compensation Program, there are several caveats to billing and payment that all medical providers should be aware of:

- Costs for the treatment of injuries (such as x-rays) and pre-existing medical conditions are not eligible for payment under this protocol. Additional charges not related to the collection of evidence and preventative medications may be billed to the patient or patient’s insurance.

- The HIV nPEP prescription cost is covered, whether or not the patient reports the crime to law enforcement, as long as a sexual assault kit has been completed;

- If additional medical costs (beyond the acute forensic sexual assault examination and follow up circumstances listed above) are incurred by the patient as a result of the sexual assault and subsequent treatment, the patient cannot access Victims’ Compensation funding without reporting the crime;

- Victims’ Compensation funds cannot be third-party billed for what patient health insurance fails to cover;

- This protocol applies to patients whose crime occurred in New Hampshire.

- Forensic Sexual Assault Examinations and HIV nPEP prescriptions must be received on separate itemized billing statements (universal UB forms), with appropriate medical codes and back up documentation in order to be considered for payment.

NOTICE

As of January 1, 2013, all forensic sexual assault examination expenses (including one follow-up visit and, if necessary, one follow-up visit with Infections Disease) will be paid at the Fee for Service Medicaid Rate. The caps of $800 for exam/$200 for follow up will no longer be applied.
Eligible bills and forms should be submitted directly to the following address:

New Hampshire Victims’ Compensation Program  
Office of the Attorney General  
33 Capitol Street  
Concord, NH 03301  
1 800 300-4500 (In NH only) (603) 271-1284  
FAX: 603-223-6291

PAYMENT FOR NECESSARY FOLLOW-UP VISIT

There are many reasons why it may be in the patient’s best interest to see a health care professional in follow up to the acute examination. Some of these reasons are as follows:

- The patient sustained physical injuries that warrant a re-check with or without photographs
- The patient opted to begin the HIVnPEP regimen
- The patient showed signs of significant psychological distress
- The patient requires testing for other STI’s

If the patient agrees to see their original examiner or a follow-up visit and has no health insurance, the examiner/facility can bill the Fee for Service Medicaid Rate for a follow-up visit directly to the Attorney General’s Office regardless of whether the patient has reported the crime to law enforcement. See Appendix O for the Follow-Up Visit Voucher Form.
APPENDICES
APPENDIX A
SEXUAL ASSAULT PROTOCOL/EVIDENCE COLLECTION KIT AND DOMESTIC VIOLENCE PROTOCOL STATUTE

NH RSA 21-M:8-c  *Victim of Alleged Sexual Offense*. If a physician or a hospital provides any physical examination of a victim of an alleged sexual offense to gather information and evidence of the alleged crime, these services shall be provided without charge to the individual. Upon submission of appropriate documentation, the physician or hospital shall be reimbursed for the cost of such examination by the Department of Justice to the extent such costs are not the responsibility of a third party under a health insurance policy or similar third party obligation. The bill for the medical examination of a sexual assault victim shall not be sent or given to the victim or the family of the victim. The privacy of the victim shall be maintained to the extent possible during third party billings. Billing forms shall be subject to the same principles of confidentiality applicable to any other medical record under RSA 151:13. Where such forms are released for statistical or accounting services, all personal identifying information shall be deleted from the forms prior to release.

21-M:8-d  *Standardized Rape Protocol and Kit and Domestic Violence Protocol*. The Department of Justice shall adopt, pursuant to RSA 541-A, and implement rules establishing a standardized rape protocol and kit and a domestic violence protocol to be used by all physicians or hospitals in this state when providing physical examinations of victims of alleged sexual offenses; and alleged domestic abuse, as defined in RSA 173-B:1.

CHILD ABUSE AND NEGLECT MANDATORY REPORTING LAW

I. Reporting is Mandatory
New Hampshire Law (RSA 169-C:29-30) requires that any person who has reason to suspect that a child under the age of 18 has been abused or neglected must report the case to: Central Intake Unit of the New Hampshire Division for Children, Youth and Families (DCYF).

II. An Abused Child is one who has:
A. Been sexually molested; or
B. Been sexually exploited; or
C. Been intentionally physically injured; or
D. Been psychologically injured so that said child exhibits symptoms of emotional problems generally recognized to result from consistent mistreatment or neglect; or
E. Been physically injured by other than accidental means.

III. A Neglected Child means a child:
A. Who has been abandoned by his parents, guardian, or custodian; or
B. Who is without proper parental care or control, subsistence, education as required by law, or other care or control necessary for his physical, mental or emotional health, when it is established that his health has suffered or is very likely to suffer serious impairment; and the deprivation is not due primarily to the lack of financial means of the parents, guardian or custodian; or
C. Whose parents, guardian or custodian are unable to discharge their responsibilities to and for the child because of incarceration, hospitalization or other physical or mental incapacity.

Note: A child who is under treatment solely by spiritual means through prayer, in accordance with the tenets of a recognized religion by a duly accredited practitioner thereof, shall not for that reason alone be considered to be neglected.

IV. Nature and Content of Report
A. Oral - immediately by telephone or otherwise.
B. Written - within 48 hours if requested.
C. Content - if known.
   1. Name and address of the child suspected of being neglected or abused.
   2. Name of parents or persons caring for child.
   3. Specific information indicating neglect or the nature of the abuse (including any evidence of previous injuries).
   4. Identity of parents or persons suspected of being responsible for such neglect or abuse.
   5. Any other information, which might be helpful or is required by the bureau.

V. Immunity from Liability
Anyone who makes a report in good faith is immune from any liability, civil or criminal. The same immunity applies to participation in any investigation by the bureau or judicial proceedings resulting from such a report.

VI. Privileged Communication
"The privileged quality of communication between a professional person and his patient or client, except that between attorney and client, shall not apply to proceedings instituted pursuant to this chapter and shall not constitute grounds for failure to report as required by this chapter."

VII. Penalty
Violation of any part of the New Hampshire Child Protection Act, including failure to report is punishable by law.
"Anyone who knowingly violates any provision of this subdivision shall be guilty of a misdemeanor." (RSA 169-C:39.) In New Hampshire, a misdemeanor is punishable by up to one year's imprisonment, a one thousand-dollar fine, or both.

APPENDIX H
ELDERLY AND ADULT SERVICES MANDATORY REPORTING LAW

Section 161-F:46

161-F:46 Reports of Adult Abuse; Investigations. – Any person, including, but not limited to, physicians, other health care professionals, social workers, clergy, and law enforcement officials, suspecting or believing in good faith that any adult who is or who is suspected to be incapacitated has been subjected to abuse, neglect, self-neglect, or exploitation or is living in hazardous conditions shall report or cause a report to be made as follows:

I. An oral report, by telephone or otherwise, shall be made immediately, followed by a written report, if so requested, to the commissioner or his authorized representative. When oral reports are made after working hours of the department, or on weekends or holidays, such reports shall be made to the police department of the appropriate political subdivision, or to the sheriff of the county, in which the alleged abuse, neglect or exploitation occurred. Law enforcement officials receiving reports under this paragraph shall notify the commissioner within 72 hours of receipt of such reports.

II. Within 72 hours following receipt by the commissioner or his authorized representative of such oral reports, an investigation shall be initiated by the commissioner or his authorized representative.

III. Investigations shall not be made if the commissioner or his authorized representative determines that the report is frivolous or without a factual basis.

Understanding DNA Evidence: A Guide for Victim Service Providers
Patient meets nPEP criteria and chooses to begin nPEP therapy

Examiner consult by phone with Infectious Disease (ID)

ID selects antiretroviral (ART) regimen
- Examiner reviews dosing instructions
- Examiner reviews side effects and tools for management
- Examiner reviews follow-up testing (HIV at 3 months and 6 months)
- Examiner has phone contact for patient follow-up

7-day dose pack* dispensed at time of exam (1st dose taken right away)
Remaining dosage dispensed within 7 days of initial examination

Follow-up (F/U) plan discussed (choose one option)

Patient to see ID for F/U
Within one week of exam

Patient to see SANE for F/U
1-2 weeks from exam

Patient to see PCP for F/U
1-2 weeks from exam

Fill out and give to patient the
nPEP Patient Information Sheet

If you have questions about providing your patient with HIV prophylaxis, you may call the National HIV Hotline at 1-888-448-4491.

NOTE: *See the State of New Hampshire Board of Pharmacy meeting minutes from August 16, 2006 which can be found at the web address [http://www.nh.gov/pharmacy/new.html](http://www.nh.gov/pharmacy/new.html), which verifies the Board’s waiver of rule Ph 709.07(a) and allows dispensing of this medication in this circumstance.
Although HIV-antibody seroconversion has been reported among persons whose only known risk factor was sexual assault or abuse, the risk for acquiring HIV infection through a single episode of sexual assault is low. The overall probability of transmission of HIV during a single act of intercourse from a person known to be HIV-infected, depends on many factors.

- Following the CDC guidelines, the medical provider should evaluate the patient, and determine whether s/he fits the criteria to be given PEP.
- If so, the patient should be given the 7-day dose pack* dispensed at time of exam (1st dose taken right away)
- The remaining dosage must be dispensed within 7 days of initial dose at no cost to the patient.
- The patient should never be given a prescription to take to a local pharmacy to fill.

*NOTE: The State of New Hampshire Board of Pharmacy, at their August 16, 2006 meeting, (see http://www.nh.gov/pharmacy/new.html for meeting minutes) voted to waive rule 709.07 that limits emergency rooms from dispensing more than a 3 day dose of medications, and allow dispensing the full 28 day dose pack of this medication in this circumstance.

- The patient should be given a copy of the HIVnPEP Patient Information Sheet which outlines the importance of follow up care and the side effects of the medication. (See Appendix M)
- If the patient does not have medical insurance, the Hospital should send a detailed bill, separate from the bill for the medical/forensic examination, to the New Hampshire Victims’ Compensation Program at the above address. The patient should not be charged for any out of pocket expenses for filling these prescription(s).
APPENDIX M
HIV PROPHYLAXIS (HIVnPEP)
PATIENT INFORMATION FORM

Step 14 a.

You have decided to take medicine called post-exposure prophylaxis (PEP). These medicines reduce your risk of becoming infected with HIV. **The PEP medicines must be taken for a total of 28 days. You will need follow-up care from nurses or doctors within a week** to make sure the medicines are being taken correctly, for further testing, and to help you with any problems or questions.

**WARNING: THE PEP MEDICINES MUST BE TAKEN FOR A TOTAL OF 28 DAYS, YOU WILL NEED FOLLOW-UP CARE FROM NURSES OR DOCTORS WITHIN 4 TO 5 DAYS OF STARTING THESE**

There are several important things that you need to know when starting the medicines:

**Follow-up Care:**
You should be seen by a nurse or doctor in contact with Infectious Disease within one week. You have chosen to see ____________________________________ for your follow-up.

Please call to schedule this appointment by calling ___-______ OR your appointment has been scheduled for ____/_____/______ at _______ AM/PM with ____________________________________ (provider name). During the appointment you will talk about any problems you may be having from the medicines, and arrange for further testing. *It is important that you have laboratory testing done as recommended.*

**Taking your Medicine:**
These medications need to be taken as directed. It is important that you not miss any doses. **DO NOT STOP TAKING WITHOUT FIRST TALKING WITH YOUR DOCTOR OR NURSE.**

**Side Effects:** *
You may experience side effects from this medication. If there are side effects, let your doctors or nurses know. They can help you manage problems. The medications interact with many other prescriptions and over the counter medications, as well as street drugs. Contact your doctor or nurse before starting any new medication. *Some of these medications may interfere in the effectiveness of birth control pills. Using additional protection, such as latex condoms, is recommended while you are on these medications.*

Depending on the medication, the most common side effects are: stomach upset, diarrhea and nausea, headache, rash. Other possible side effects include: muscle ache, insomnia, fatigue, dizziness, lightheadedness, and ‘feeling high.’ You may feel weak or tired. Medications decreases birth control effectiveness; use condoms. Side effects usually go away after a few days; tell your provider if they do not. Avoid alcohol. If you experience rash, abdominal pain, fever or severe nausea call your provider right away. Take with food to decrease stomach upset. Lab tests may be necessary to check blood counts.
Medication Refills:
You were given a ______ day supply of medicines, and you will need to get the remainder to complete the 28-day course of medicine. You should obtain the rest of the prescription from _______________________________________.

MEDICATION REGIMEN

Your medical provider will provide you with a medication regimen. To see the medications you have been given, see Step 14 – Medication Information Form.

MEDICATION INFORMATION**

It is important for you to take these medications correctly. It is equally important if you have questions about these medications, that you get answers. This information sheet should help.

What if I want to stop these medications?
Do not stop the medicines before you talk with your doctor or nurse. Take the medications as directed. They will not work as well if you miss a dose.

What do I do if I have a problem with side effects from the medicines?
Talk with your nurse or doctor if this happens. There are ways to manage side effects. Side effects usually get better after the first week.

How should I store the medicines?
Keep these medicines out of the reach of children.

Should I be concerned if I take birth control pills?
Some of these medicines may make birth control pills less effective. We recommend that if you are sexually active, you use latex condoms. This is especially important while you are taking these medicines.

What if I take other drugs or medicines?
Be sure to tell your doctor or nurse what other medicines or drugs you take. Other medicines including over-the-counter medicines can interact with PEP medicines. Also, street drugs can interact with these medicines.

Will I need to have blood tests done?
Yes, your doctor or nurse will tell you when you need to have blood tests done. It is important to get them done when recommended.

---

2 Medication Information adapted from DHMC Infectious Disease HIV Program, 2013
APPENDIX N
NH DEPARTMENT OF JUSTICE VICTIMS’ COMPENSATION PROGRAM
FORENSIC SEXUAL ASSAULT EXAMINATION/
HIV NPEP PROPHYLAXIS BILLING PROTOCOL

It is the intent of the New Hampshire Department of Justice to provide financial assistance to a victim of sexual assault and, on behalf of the victim, provide payment for the cost of the examination and follow-up care associated with a sexual assault. These expenses may include the following:

1. The sexual assault examination and evidence collection.
2. Medications for prophylaxis, including HIV prophylaxis, pregnancy prevention and STDs.
3. A follow-up medical visit in accordance with clinical guidelines.
4. A follow-up medical visit with infectious diseases, as necessary.

In addition to the examination process, the licensed examiner must discuss the billing process with the patient and complete the attached billing form for every patient who receives a forensic sexual assault examination (FSAE).

NOTE: The State of New Hampshire Victims’ Compensation Program is responsible for the payment of forensic sexual assault examinations not covered by medical insurance or other third party payment when the examination is conducted for purposes that include collecting evidence. The following guidelines should be used in regard to hospital billing:

1. The patient should never be billed for the Forensic Sexual Assault Exam.

2. In Anonymous Reporting cases, all bills, regardless of whether or not patient has Medicaid or private health insurance, should be sent directly to the Attorney General’s Office, Victims’ Compensation Program for payment. The patient’s insurance should not be billed under any circumstances.

3. If the patient has health insurance and chooses to bill their insurance, then insurance information should be obtained by appropriate hospital personnel, and the insurance company should be billed directly for the cost of the examination. The patient and Victims’ Compensation should not be billed for anything above the coverage limit.

4. If the patient indicates that she or he does not want their insurance billed for the examination or HIV nPEP medication, the examining facility will forward all charges related to the FSAE to the Attorney General’s Office, Victims’ Compensation Program.

5. If the patient has no insurance, the Victims’ Compensation Program should be billed directly.
6. If the patient is covered by Medicaid/Medicare, and it is not an anonymous reporting kit, then all bills must be sent to Medicaid/Medicare for payment. The patient and Victims’ Compensation should not be billed for anything above the coverage limit.

PAYMENT FOR HIVnPEP

The State of New Hampshire has determined that it will be responsible for the cost of HIVnPEP at the Fee for Service Medicaid Rate when it is recommended for a patient following an acute sexual assault, and when the patient has no medical insurance. (See Appendix N) for HIVnPEP payment guidelines.

Because payment for these medications will come from the New Hampshire Victims’ Compensation Program, there are several caveats to billing and payment that all medical providers should be aware of:

- Costs for the treatment of injuries (such as x-rays) and pre-existing medical conditions are not eligible for payment under this protocol. Additional charges not related to the collection of evidence and preventative medications may be billed to the patient or patient’s insurance.
- The HIV nPEP prescription cost is covered, whether or not the patient reports the crime to law enforcement, as long as a sexual assault kit has been completed;
- If additional medical costs (beyond the acute forensic sexual assault examination and follow-up circumstances listed above) are incurred by the patient as a result of the sexual assault and subsequent treatment, the patient cannot access Victims’ Compensation funding without reporting the crime;
- Victims’ Compensation funds cannot be third-party billed for what patient health insurance fails to cover;
- This protocol applies to patients whose crime occurred in New Hampshire.
- Forensic Sexual Assault Examinations and HIV nPEP prescriptions must be received on separate itemized billing statements (universal UB forms), with appropriate medical codes and back up documentation in order to be considered for payment.

NOTICE

As of January 1, 2013, all forensic sexual assault examination expenses (including one follow-up visit and, as necessary, a follow-up visit with Infections Diseases) will be paid at the Fee for Service Medicaid Rate. The caps of $800 for exam/$200 for follow up will no longer be applied.

Eligible bills and forms should be submitted directly to the following address:

New Hampshire Victims’ Compensation Program  
Office of the Attorney General  
33 Capitol Street  
Concord, NH 03301  
1 800 300–4500 (In NH only)  
(603) 271-1284  
FAX: 603-223-6291
STATE OF NEW HAMPSHIRE
Forensic Sexual Assault Examination Billing Form

INSTRUCTIONS

1. The patient has the right to remain anonymous or provide their name when submitting a forensic sexual assault exam. Please list anonymous OR the patient’s name in this section.

2. **Payment options:**
   a. **Option 1:** If this option is selected the hospital will be reimbursed by the New Hampshire Victims’ Compensation Program at the Fee for Service Medicaid rate for evidence collection.
   b. **Option 2:** If this option is selected, the patient cannot be billed for co-payment or deductibles. The New Hampshire Victims’ Compensation Program will not provide payment for co-payments or deductibles. This balance must be a charitable write off by the hospital.
   c. **Option 3:** If this option is chosen, neither the patient nor the insurance provider is billed. The hospital will be reimbursed by the New Hampshire Victims’ Compensation Program at the Fee for Service Medicaid rate for evidence collection.

3. A forensic sexual assault examination kit number and patient’s date of birth must be provided in order for the New Hampshire’s Victims’ Compensation Program to consider payment at the Fee for Service Medicaid rate.

4. An itemized billing statement (universal UB form), with appropriate medical codes, must be submitted with the billing form for payment consideration. Failure to provide billing statement/payment form will result in payment denial of the claim.

5. Complete all other sections of this form as indicated. Incomplete forms are subject to payment denial.

6. Once completed, MAIL/FAX this form and required billing documentation to:

   **The New Hampshire Victims’ Compensation Program**
   33 Capitol Street
   Concord, NH 03301
   603-271-1284
   FAX: 603-223-6291
STATE OF NEW HAMPSHIRE
FORENSIC SEXUAL ASSAULT EXAMINATION BILLING FORM

______________________________ (name of patient/if anonymous reporting, then write
“Anonymous”) has been informed that the New Hampshire Victims’ Compensation Program can
provide payment for the examination, collection of evidence, and treatment related to the visit for
sexual assault; including HIV Post Exposure Prophylaxis, if necessary. It is the intent of this
form to allow the patient to make an informed decision concerning the method of payment
she/he chooses.

(Please choose one option below):

Option 1  ____ Patient does not have insurance that would cover this treatment.
Option 2  ____ Patient does have insurance or Medicaid, which will be billed for the treatment
been provided. Patient will not be charged for any co-payments or deductibles associated with
this treatment.
Option 3  ____ Patient does have insurance that would cover this treatment but do not want
insurance carrier billed

This section must be completed by the SANE provider or treating physician:

Forensic Sexual Assault Examination Kit #________________Patient’s Account #___________
Patient’s Date of Birth (REQUIRED) __________________
RX # (for HIV nPEP medications ONLY)________________
# of days dispensed (for HIV nPEP medications ONLY): _______
Was 7 days HIV nPEP medications dispensed in ER?: Yes or No
The Town/City/State and/or Country where this assault occurred: _________________________

(If assault occurred in another state, New Hampshire Victims’ Compensation Program cannot
provide payment. Please contact the Victims’ Compensation Program in the state where crime
occurred)

HIV POST EXPOSURE PROPHYLAXIS PRESCRIPTION MEDICATIONS WILL BE
PAID TO THE HOSPITAL/FACILITY AT MEDICAID COSTS BY THE NEW
HAMPSHIRE VICTIMS’ COMPENSATION PROGRAM.

SANE or Attending Physician (Please Print)       Telephone

Signature of SANE or Attending Physician

Name of Facility                            Date of Service

Name of Billing Contact Person              Telephone
All charges should be received on the universal UB invoice with back up documentation, including the services provided and appropriate medical coding. This form must be attached with UB invoice. Failure to provide all requested information will result in denial of payment. When completed, please mail or fax these documents to:

New Hampshire Victims’ Compensation Program  
Office of the Attorney General  
33 Capitol Street  
Concord, NH 03301  
FAX: 603-223-6291

Note to provider: Be sure that your billing department has a copy of this completed Billing Form and the Billing/Payment Instructions sheet.

NOTICE

As of January 1, 2013, all forensic sexual assault examination expenses (including the follow-up visit and, as necessary, a follow-up visit with Infections Diseases) will be paid at the Fee for Service Medicaid Rate. The caps of $800 for exam/$200 for follow up will no longer be applied.

09/2011
APPENDIX O
SEXUAL ASSAULT FORENSIC MEDICAL FOLLOW UP EXAMINATION VOUCHER FORM

New Hampshire Victims’ Compensation Program
New Hampshire Department of Justice
33 Capitol Street
Concord, NH 03301
Tel: 603-271-1284
Email: victimcomp@doj.nh.gov

Billing Instructions for Health Care Providers:

When a patient has no medical insurance, or wishes not to use their insurance, the State of New Hampshire is responsible for paying for the forensic/medical examination of victims of sexual assault (RSA 21-M:9-c), as well as one follow-up visit with the medical provider of her/his choice, paid at the Fee for Service Medicaid rate. The patient presenting this follow-up visit voucher, should not be required to pay any out of pocket costs for the follow-up examination you are performing, and should not be billed for any costs over the Medicaid rate. Please mail the original Voucher, along with an itemized bill, to the New Hampshire Victim’s Compensation Program at the above address.

For the Medical Provider: (This voucher is not valid unless the following information is completed.)

I, __________________________ (Name of Patient) voluntarily authorize the disclosure of billing information, including name, Date of birth, diagnosis and procedure codes. The information is to be disclosed by ________________ (Name and Address of Provider) and is to be provided to the New Hampshire Victim’s Compensation Program, Attorney General’s Office, 33 Capitol Street, Concord, New Hampshire 03301. The purpose of this disclosure is to verify patient information so that payment for treatment may be made. The information to be disclosed from my health record is only information related to the care provided to me on ____________ (date) and I understand that my Protected Health Information (PHI) may be re-disclosed and therefore no longer protected under the Privacy Rule. I understand that the Attorney General’s Office will maintain the privacy of my PHI in accordance with RSA 21-M:8-c and will not release it without additional authorization. I further understand that I have the right to revoke this authorization in writing except to the extent that it has already been relied upon. The authorization is valid for one year following the treatment date.

Authorized by: __________________________ Date: __________________
(Patient Signature)
Witness: __________________________ Date: __________________
Relationship to Patient: __________________________

For the Follow-up Provider: (Please complete the following information so that we can pay you promptly.)

Medical Provider: __________________________
Federal Employer Identification Number: __________________________
Remittance Address: __________________________
The Health Insurance Portability and Accountability Act of 1996 (HIPAA) required that the United States Secretary of Health and Human Services (HHS) issue health privacy regulations if Congress did not enact comprehensive health privacy protections by August 21, 1999. Congress failed to act by the deadline. The Secretary released proposed regulations in November 1999. As required by HIPAA, HHS published the final regulation on December 28, 2000. By April 14, 2004, all covered entities (health care providers, health plans and health care clearinghouses) had to be in compliance. Despite the new regulations, many entities that regularly receive health information, including employers, casualty and property insurance companies and workers compensation carriers, are not required by this federal law to protect patient privacy.

The new federal rules do not preempt state laws that are more protective of patient privacy. In addition to not preempting more protective state laws, the regulation does not preempt state laws that authorize or prohibit disclosure of health information about a minor to a parent, guardian or person acting in loco parentis. For a summary of state privacy laws see the Georgetown University Health Privacy Project’s The State of Health Privacy: An Uneven Terrain (Health Privacy Project (July 1999) (healthprivacy.org).

In the most general sense, the regulation prohibits use and disclosure of protected health information unless expressly permitted or required by the regulation. The regulation requires disclosure (1) to the individual who is the subject of the information and (2) to HHS for enforcement purposes. This regulation requires entities to make a good faith effort to inform patients in a notice of privacy practices about how sensitive information is used and disclosed.

There are several circumstances where covered entities may use or disclose protected health information without the written consent or authorization of the patient, including disclosures to report child abuse and neglect; about a victim of abuse, neglect or domestic violence under certain circumstances; for law enforcement purposes; for judicial and administrative proceedings; and for public health purposes to a public health authority authorized by law to receive such a report. Mandatory reporting laws fall under the provision relating to disclosures required by law. Entities may, however, disclose information to law enforcement officials without informing the subject of the information pursuant to a court order or court-ordered warrant or a subpoena, summons issued by a judicial officer, grand jury subpoena, or an administrative request.
APPENDIX Q: EVIDENCE COLLECTION KIT

THE STATE OF NEW HAMPSHIRE
SEXUAL ASSAULT EVIDENCE COLLECTION KIT INSTRUCTIONS

USE POWDER FREE GLOVES
USE TAPE, NOT STAPLES TO SEAL EVIDENCE

This kit is designed to assist the sexual assault examiner in the collection of evidentiary specimens for analysis by the New Hampshire State Police Forensic Laboratory. The hospital is not requested or encouraged to analyze any of the specimens/evidence collected in this kit. Any specimens required by the hospital are to be collected with hospital supplies and retained by the hospital.

KIT USE IN THE PEDIATRIC POPULATION

* The kit should be utilized in all acute cases of child sexual assault using the same timeframes outlined for the adult population.
* Always collect two buccal swabs (STEP 8) as a known DNA sample of the patient.
* Swabs (STEP 7, 10 11, 12) should be collected from the appropriate orifice and/or area as driven by the patient history and exam
* All forms included in kit should be utilized whenever possible. Ancillary forms used such as the CARE network documentation should not be included in the kit.

STEP 1 AUTHORIZATION FOR COLLECTION AND RELEASE/TRANSFER OF EVIDENCE AND USE/DISCLOSURE OF PROTECTED HEALTH INFORMATION FORM

NOTE: The top section is for reported/reportable cases, the bottom section for anonymous cases.
Fill out all information requested and have patient (or parent/guardian, if applicable) and witness sign where indicated.

STEP 2 SEXUAL ASSAULT EVIDENCE COLLECTION KIT INVENTORY
Fill out upon completion of evidence collection and before sealing the kit. Keep in medical records.

STEP 3 SEXUAL ASSAULT MEDICAL/FORENSIC REPORT FORM
Please complete in all instances, regardless of patient age. Fill out all information requested.

STEP 4 BLOOD/URINE TOXICOLOGY SAMPLES (Collect only if drug facilitated sexual assault is suspected.)

NOTE: In order to minimize patient discomfort, blood needed for other tests, including pregnancy, should be drawn at this time. THESE TEST RESULTS SHOULD NOT BE INCLUDED IN KIT, BUT SHOULD REMAIN AT THE HOSPITAL.

If ingestion was within 48 hours, collect both blood and urine.
If ingestion was between 48 and 72 hours, collect a urine sample only.
If ingestion was over 72 hours, neither sample should be taken.

For blood, collect 10 ml of liquid blood into a hospital-supplied EDTA tube (lavender top) using normal blood drawing procedures, expect in pre-pubertal cases. Label with patient information, place in bubble wrap bag and into Blood/Urine Toxicology Samples envelope. Seal and fill out all information requested on envelope.

For urine, collect a 100 ml urine sample in hospital-supplied urine sample container. Label urine sample container with patient information, seal urine container in a biohazard bag, and leave outside the kit for law enforcement personnel.

If blood/urine sample is taken, ask patient if she/he is on any prescription drugs and document drugs on Step 3 Medical/Forensic Report Form.

STEP 5 OUTER CLOTHING COLLECTION

NOTE: • If patient changed clothing after assault, inform law enforcement officer in charge so that the clothing worn at the time of the assault can be collected.
• If patient is not wearing the clothing worn at the time of the assault, collect only the items that are in direct contact with the patient’s genital area.
• Wet or damp clothing should be air dried before packaging.
• Do not cut through any existing holes, rips or stains in patient’s clothing.
• Do not shake out patient’s clothing or microscopic evidence may be lost.
• If additional clothing bags are required, use only new paper (grocery-type) bags.
• Do not collect patient valuables, cash, jewelry or credit cards.
Instruct patient to carefully disrobe. Collect each item as removed and place in Outer Clothing bag. Fold top of bag over and seal with tape, then affix evidence seal over fold and initial seal. Fill out all information requested on bag label.

**STEP 6  UNDERPANTS COLLECTION**

**NOTE:**
- If patient not wearing underpants, collect the item of clothing that had contact with the patient’s genitalia.
- Collect sanitary pads and tampons as appropriate.

Instruct patient to carefully remove underpants, then place in Underpants bag. Fold top of bag over and seal with tape, then affix evidence seal over fold and initial seal. Fill out all information requested on bag label.

**STEP 7  ORAL SWABS AND SMEAR**

**NOTE:**
- Do not stain or chemically fix the smear.
- Do not moisten swabs prior to sample collection.

If oral sexual activity occurred within 24 hours of the exam, using both swabs simultaneously, carefully swab the buccal area and gum line. Prepare the oral smear by wiping both swabs across the **TOP (labeled)** surface, within the circle, of the microscope slide. Allow swabs (2) and smear (1) to air dry. Return smear to slide holder and place swabs in swab box, then fill out information requested on swab box. Return smear and swab box to the Oral Swabs and Smear envelope. Seal and fill out all information requested on envelope.

**STEP 8  DNA SAMPLE/Buccal Swabs**

Using both swabs simultaneously, swab the inner aspects of both cheeks until moistened. Allow swabs (2) to air dry. Place swabs in swab box, then fill out information requested on swab box. Return swab box to the DNA Sample/Buccal Swabs envelope. Seal and fill out all information requested on envelope.

**STEP 9  FOREIGN MATERIAL/Pubic Combings Collection**

**NOTE:** If more than two types of samples are collected, use additional sterile swabs from hospital stock.

Remove folded paper from the Foreign Material/Pubic Hair Combings envelope. Unfold and place on flat surface. Collect any foreign material such as fiber, hair, etc. (found on the body) and place in center of paper. Then refold paper in manner to retain material.

Foreign material such as dried semen, blood, saliva, or saliva from a bite mark should be collected by lightly moistening the swabs provided with sterile water and then thoroughly swabbing the area with the swabs. Allow swabs to air dry and place in swab box(es), then fill out information requested on swab box(ex).

Return folded paper and swab box(es) to Foreign Material/Pubic Hair Combings envelope. Note location from which sample(s) was/were taken on anatomical drawings on envelope.

If the patient has not bathed or showered and if sexual activity took place within 3 (72 hours) days of the exam, remove paper towel and comb provided in Foreign Material/Pubic Hair Combings envelope. Place towel under patient’s buttocks. Using comb provided, comb pubic hair in downward strokes so that any loose hairs and/or debris will fall onto paper towel. Refold paper towel in manner to retain both comb and any evidence present. Return to the Foreign Material/Pubic Hair Combings envelope. Seal and fill out all information on envelope.

**STEP 10  RECTAL SWABS AND SMEAR**

**NOTE:**
- Do not stain or chemically fix smear.
- Do not moisten swabs prior to sample collection.

If rectal sexual assault occurred within 48 hours of the exam, use both swabs simultaneously and carefully swab the rectal canal. Prepare the rectal smear by wiping both swabs across the **TOP (labeled)** surface, within the circle, of the microscope slide. Allow swabs (2) and smear (1) to air dry. Return smear to slide holder and place swabs in swab box, then fill out information requested on swab box. Return smear and swab box to the Rectal Swabs and Smear envelope. Seal and fill out all information requested on envelope.

**STEP 11  EXTERNAL GENITALIA/Penile Swabs**

If cunnilingus or fellatio was performed on the patient within 3 (72 hours) days of the exam and the patient has not bathed/showered, or the patient is prepubertal, moisten both swabs with distilled water and swab the external genitalia of the patient. Allow swabs (2) to air dry and place in swab box, then fill out all information requested on swab box. Return swab box to the External Genitalia/Penile Swabs envelope. Seal and fill out all information requested on envelope.
PENILE SWABS
If sexual activity took place within 3 (72 hours) days of the exam and the patient has not bathed/showered, slightly moisten both swabs with sterile water and thoroughly swab the external surface of the penile shaft and glans, avoiding the urethral meatus. Allow swabs (2) to air dry and place in swab box, then fill out all information requested on swab box. Return swab box to the External Genitalia/Penile Swabs envelope. Seal and fill out all information requested on envelope.

STEP 12 VAGINAL/CERVICAL SWABS AND SMEAR

| NOTE: | • Do not collect from pre-pubertal patients.  
|       | • Do not stain or chemically fix smear.  
|       | • Do not moisten swabs prior to sample collection.  
|       | • Do not aspirate vaginal vault or dilute sample in any way. |

If sexual activity took place within 5 days of the exam, use two swabs simultaneously and swab the vaginal vault. Using the second pack of swabs and using one swab at a time, swab the cervix. Prepare the vaginal smear by wiping the first two swabs collected from the vaginal vault across the TOP (labeled) surface, within the circle, of the microscope slide. Allow swabs (4) and smear (1) to air dry. Return smear to slide holder and place each set of swabs in separate swab boxes, then fill out information requested on swab boxes. Return slide holder and swab boxes to Vaginal/Cervical Swabs and Smear envelope. Seal and fill out all information requested on envelope.

*Any other examination and testing of the ano-genital and pelvic area should occur simultaneous with this step.*

STEP 13 MEDICAL/FORENSIC EXAMINATION FORMS
Using appropriate forms and set of anatomical drawings, note findings. Photograph external injuries both with and without a scale (6 inch ruler provided) as deemed necessary. Sign and date forms where indicated.

STEP 14 PATIENT INFORMATION FORM
Fill out all information requested on form; then have Patient (or Parent/Guardian if applicable) sign on bottom of form. Retain white copy for hospital records.

STEP 14A HIVnPep PATIENT INFORMATION FORM
If HIV PEP was given, fill out all information requested on HIV Prophylaxis (HIVnPEP) Information Form, then have Patient/Parent/Guardian sign on bottom of form. Give form to patient.

If you have questions about providing HIVnPEP medications please call National HIVnPEP Hotline at 1-888-448-4911.

STEP 15 Give patient the following forms:

a. FOLLOW UP EXAMINATION VOUCHER FORM  
b. SEXUAL ASSAULT CRISIS CENTER LIST  
c. FINANCIAL ASSISTANCE FOR VICTIMS CARD

STEP 16 POSTCARD
Please complete the information on the enclosed stamped, self-addressed postcard and put it in the mail. IT IS VERY IMPORTANT THAT THIS IS DONE WITH EACH KIT USED. Please include medical provider’s name on postcard.

FINAL INSTRUCTIONS

1) Make sure all information requested on all forms, envelopes and bag labels has been filled out completely.  
2) Separate all forms and distribute copies as indicated on the bottom of each form.  
3) With the exception of sealed and labeled Underpants and Outer Clothing bags, return all other evidence collection envelopes, used or unused, to kit box.  
4) Initial and affix red police evidence seals and BIOHAZARD label where indicated on box top.  
5) Fill out all information requested on kit box top under “For Hospital Personnel”.  
6) Hand sealed kit, sealed bags, and appropriate forms to investigating officer, and obtain your signature as well as that of law enforcement to ensure that Chain of Custody requirements have been met.

Note: The Kit needs to be picked up by law enforcement in the jurisdiction where the crime occurred, unless otherwise arranged by that law enforcement agency. If officer is not present at this time, place sealed kit and bags in secure and refrigerated area and hold for pick up by law enforcement.
**STEP 1  AUTHORIZATION FOR COLLECTION AND RELEASE/TRANSFER OF EVIDENCE AND USE/DISCLOSURE OF PROTECTED HEALTH INFORMATION FORM**

(Please print, type or use a patient information stamp.)

| Patient’s Name or Kit Number (if anonymous) | _________________________ |
| Date of Birth | ____________________________ |
| Medical Record Number | ____________________________ |
| Date of Examination | ____________________________ |
| (Month/Day/Year) | |

**REPORTED CASES:**

Person authorizing release of information is (check one):  
☐ Patient  ☐ Patient’s Parent/Guardian  ☐ Other  
Hospital received permission to contact patient:  
☐ By Telephone  ☐ By Mail  ☐ Permission Denied

**DISCLOSURE OF PROTECTED HEALTH INFORMATION/RECORD RELEASE BY THE DEPARTMENT OF JUSTICE**

I hereby authorize ________________________(Health Care Facility) to use/disseminate my individually identifiable health information as described below (which may include information concerning treatment for drug/alcohol abuse, mental health, and HIV status, if applicable). I understand that if the recipient authorized to receive the information is not a covered entity, (e.g., insurance company or health care provider), the disclosed information may no longer be protected by federal and state privacy regulations.

**Purpose of the use and/or disclosure:**  
Mutually share information for health and safety

**Description of information to be disclosed:**

- Evidence kit documentation forms
- One sealed evidence collection kit containing evidence (including blood)
- Urine Sample for “Drug-Facilitated Sexual Assault” Test (sealed in biohazard bag OUTSIDE KIT)
- Evidence bags sealed outside of kit (examiner please indicate # ______ not including urine sample)

</tr>
</tbody>
</table>

☐ Checking this box indicates that the patient chose not to be given medication that could prevent sexually transmitted infections.

The following is the medication you were given as an emergency pregnancy prevention measure:

<table>
<thead>
<tr>
<th>Medication</th>
<th>Dose and Instructions</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

☐ Checking this box indicates that the patient chose not to be given medication that could prevent pregnancy, or the time frame had passed when Emergency Pregnancy Prevention would have been considered effective.

☐ You were given medicine called post-exposure prophylaxis (PEP) to reduce the risk of you becoming infected with HIV.

☐ If you were given PEP medications, you were given a copy of the HIV PROPHYLAXIS (HIVnPEP) PATIENT INFORMATION FORM (STEP 14A).

For more information on HIV PEP medications and side effects call the National HIV PEP Hotline at 1-888-448-4911 or log onto the Centers for Disease Control website at www.cdc.gov.

☐ At the time of your evaluation, specimens were obtained in order to look for suspected drug facilitated sexual assault. The specimens are not evaluated by the hospital laboratory, but forwarded to the NH State Police Forensic Laboratory. Information regarding the results should be obtained through the investigating law enforcement agency. If you are reporting ANONYMOUSLY, the specimens will not be analyzed until you report the crime to law enforcement.

☐ You have chosen to have the evidence collection obtained ANONYMOUSLY. The kit will be forwarded to the NH State Police Forensic Lab and will be held there, WITHOUT BEING ANALYZED, for up to 60 days from the date of your sexual assault examination. If you choose to report the crime to law enforcement during this time, the SERIAL NUMBER identifying your kit is ___________________. If you choose not to report the crime during this time, ALL EVIDENCE will then be returned to the police department having jurisdiction over where the crime occurred for storage or disposal.

☐ Under the law, NH health care professionals are obligated to report all cases of suspected child abuse or elder/incapacitated adult abuse. Because of the circumstances that brought you in today, a report has been/will be made with the following agencies:

<table>
<thead>
<tr>
<th>Agency</th>
<th>Information</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>

</tbody>
</table>

☐ You were given necessary information and the phone number of the closest sexual assault crisis center for follow-up support and confidential free services.

83
☐ You were given a copy of the **FOLLOW UP EXAMINATION VOUCHER FORM**.

☐ You were given a copy of the **SEXUAL ASSAULT CRISIS CENTER LIST**.

☐ You were given a copy of the **FINANCIAL ASSISTANCE FOR VICTIMS CARD**.

☐ You were given information and the phone numbers for the Division of Children Youth and Families.

☐ If you do not have medical insurance, the State of NH will pay for the cost of this evaluation. If you have insurance, please be sure all necessary information is forwarded to the hospital for payment.

(or Parent/Guardian if applicable)

Signature of Examiner____________________________________________ Date _______________________

Step 14A  HIV PROPHYLAXIS (HIVNPEP)  
PATIENT INFORMATION SHEET  

You have decided to take medicine called post-exposure prophylaxis (PEP). These medicines reduce your risk of becoming infected with HIV. The PEP medicines must be taken for a total of 28 days. You will need follow-up care from a nurse or doctor within a week to make sure the medicines are being taken correctly, for further testing, and to help you with any problems or questions.

**WARNING: THE PEP MEDICINES MUST BE TAKEN FOR A TOTAL OF 28 DAYS. YOU WILL NEED FOLLOW UP CARE FROM NURSES OR DOCTORS WITHIN 4 TO 5 DAYS OF STARTING THESE MEDICATIONS**

There are several important things that you need to know when starting the medicines:

**Follow-up Care**
You should be seen by a nurse or doctor in contact with Infectious Disease within one week. You have chosen to see __________________ for your follow-up. Please call to schedule this appointment by calling ___-_________ OR your appointment has been scheduled for ___/_____/_____ at ____ AM/PM with _______________________ (provider name). During the appointment you will talk about any problems you may be having from the medicines and arrange for further testing. It is important that you have laboratory testing done as recommended.

**Taking your Medicine**
These medications need to be taken as directed. It is important that you not miss any doses. Missing doses will decrease its effectiveness.  
**DO NOT STOP TAKING THE MEDICATION WITHOUT FIRST TALKING WITH YOUR DOCTOR OR NURSE.**

**Side Effects: * (See back)**
You may experience side effects from this medication. If there are side effects, let your doctors or nurses know. They can help you manage problems. The medications interact with many other prescriptions and over the counter medications, as well as street drugs. Contact your doctor or nurse before starting any new medication. Some of these medications may interfere in the effectiveness of birth control pills. Using additional protection, such as latex condoms, is recommended while you are on these medications.

Depending on the medication, the most common side effects are: stomach upset, diarrhea and nausea, headache, rash, muscle ache, insomnia, fatigue, dizziness, lightheadedness, impaired concentration, vivid dreams, and ‘feeling high.’ You may feel weak or tired. Medications decrease birth control effectiveness; use condoms. Side effects usually go away after a few days; tell your provider if they do not. Avoid alcohol. If you experience rash, abdominal pain, fever, or severe nausea, call your provider right away. Take with food to decrease stomach upset. Lab tests may be necessary to check blood counts.

**Medication Refills**
You were given a _____ day supply of medicines, and you will need to get the remainder to complete the 28-day course of medicine. You should obtain the rest of the prescription from ____________________.

**Medication Regimen**
Your medical provider will provide you with a medication regimen. To see the medications you have been given, see Step 14 – Patient Information Form.
STEP 14A HIVNPEP MEDICATION INFORMATION

It is important for you to take these medications correctly. It is equally important if you have questions about these medications, that you get answers. This information sheet should help.

What if I want to stop these medications?

Do not stop the medicines before you talk with your doctor or nurse. Take the medications as directed. They will not work as well if you miss a dose.

What do I do if I have a problem with side effects from the medicines?

Talk with your nurse or doctor if this happens. There are ways to manage side effects. Side effects usually get better after the first week.

How should I store the medicines?

Keep these medicines out of the reach of children.

Should I be concerned if I take birth control pills?

Some of these medicines may make birth control pills less effective. We recommend that if you are sexually active, you use latex condoms. This is especially important while you are taking these medicines.

What if I take other drugs or medicines?

Be sure to tell your doctor or nurse what other medicines or drugs you take. Other medicines including over-the-counter medicines can interact with PEP medicines. Also, street drugs can interact with these medicines.

Will I need to have blood tests done?

Yes, your doctor or nurse will tell you when you need to have blood tests done. It is important to get them done when recommended.

SEXUAL ASSAULT FORENSIC MEDICAL FOLLOW UP EXAMINATION VOUCHER FORM

New Hampshire Victims’ Compensation Program
New Hampshire Department of Justice
33 Capitol Street
Concord, NH 03301
(800) 300-4500
(603) 271-1284

Billing Instructions for Health Care Providers:

When a patient has no medical insurance or opts not to use their insurance, the State of New Hampshire is responsible for paying for the forensic/medical examination of victims of sexual assault (RSA 21-m:9-c), an examination with Infectious Disease, as well as one follow-up visit, with the medical provider of her/his choice, paid at the Medicaid rate. The patient presenting the follow-up visit voucher should not be required to pay any out of pocket costs for the follow-up examination you are performing and should not be billed for any costs. If you have any questions, please call the New Hampshire Victims’ Compensation Program, New Hampshire Attorney General’s Office at (800) 300-4500. Please mail the original of this Voucher, along with an itemized bill, to the New Hampshire Victim’s Compensation Program at the above address.

For the Medical Provider (This voucher is not valid unless the following information is completed.)

I, ___________________________voluntarily authorize the disclosure of billing information, including name, date of birth, diagnosis, and procedure codes. The information is to be disclosed by ____________________________ (Name of Patient)

(Name and Address of Provider)

_______________________________________________________________________________________________________________

and is to be provided to the New Hampshire Victim’s Compensation Program, Attorney General’s Office, 33 Capitol Street, Concord, New Hampshire 03301. The purpose of this disclosure is to verify patient information so that payment for treatment may be made. The information to be disclosed from my health record is only information related to the care provided to me on _____________ (Date) and I understand that my Protected Health Information (PHI) may be re-disclosed and therefore no longer protected under the Privacy Rule. I understand that the Attorney General’s Office will maintain the privacy of my PHI in accordance with RSA 21-M:8-c and will not release it without additional authorization. I further understand that I have the right to revoke this authorization in writing except to the extent that it has already been relied upon. The authorization is valid for one year following the treatment date.

FINANCIAL AID FOR VICTIMS CARD

VICTIMS OF SEXUAL ASSAULT SHOULD NOT BE BILLED FOR THE FOLLOWING SERVICES:

The **Forensic / Medical Examination** following the assault, including the collection of evidence in a sexual assault kit. Even if you have an evidence collection kit performed, it is your decision whether or not to report the crime, unless you are a minor. Collecting evidence as soon as possible after the assault is crucial to possible prosecution of the perpetrator.

- **One Follow-up Examination** with the medical provider of your choice.
- **Payment of HIV Prevention Medications and a follow-up appointment with Infectious Diseases**, if determined to be appropriate by the medical provider.
- **Testing for “Date-Rape” drugs**. If you suspect you were drugged prior to being assaulted, get tested immediately, while the drug is still in your system.

ADDITIONAL EXPENSES THAT MAY BE COVERED INCLUDE:

- **Medications**, such as those to prevent pregnancy, Hepatitis B, and other sexually transmitted infections.
- **Clothing and Bedding** that are taken as evidence by law enforcement.
- **Lost Wages** due to inability to work as a result of the physical and psychological aftermath of the assault.
- **Mental Health Counseling** with a licensed practitioner.

To receive compensation for these additional expenses, you must file a claim with the **New Hampshire Victim Assistance Commission**. Your out of pocket expenses must meet the program minimum of $100. The maximum overall compensation amount is **$25,000**.

**For more information call**
1-800-300-4500
Monday through Friday 8:00 AM to 4:30 PM.

**Applications and additional information are available online at**
www.doj.nh.gov/grants-management/victims-compensation-program

The aftermath of sexual assault can be a confusing and overwhelming time. Sexual assault victims may be eligible to receive financial compensation for a variety of crime related expenses and/or lost wages and support. You may be eligible for compensation for some of the expenses listed on the back of this card.

Your local Crisis Center provides information, support and referrals 24 hours a day, and can provide short term emergency funds for expenses such as having your locks changed, and replacing emergency items that may have been lost or damaged as a result of the assault.

**These services are free and confidential.**

To contact the Crisis Center nearest you call the Statewide Sexual Assault Hotline at 1-800-277-5570

**Financial Assistance is Available**
for Victims of Sexual Assault in New Hampshire.
APPENDIX R:
POLICY AND PROCEDURE FOR EVIDENCE COLLECTION FROM SUSPECTS IN SEXUAL ASSAULTS

Despite the fact that the majority of sexual assault victims know their offender the suspect of the crime is often overlooked in the evidence-collection process during the investigation. The goal of this section is to educate participating professionals in the "when, where, what, how and why" of evidence collection from suspects in sexual assault cases.

SUSPECT EVIDENCE COLLECTION POLICY AND PROCEDURE

Policy:

In the course of a law enforcement criminal investigation of a sexual assault, it may become necessary for law enforcement to collect evidence from the body of a suspect. In these instances, the requesting law enforcement agency may call upon the evidentiary expertise of the SANE (Sexual Assault Nurse Examiner) to collect specific evidence. The specimens collected may be obtained pursuant to either of the following circumstances:

- Search warrant/Court-ordered evidence collection of a suspect, or
- Evidence collection only with informed consent of a suspect.

Physical Evidence from suspects will be obtained using hospital medical supplies. The Sexual Assault Evidence Collection Kit will NOT be used.

In order to avoid evidence contamination, the same forensic examiner should not collect evidence from a suspect and the victim within 24 hours of each other. In the event that the same nurse must attend to both the alleged suspect and the victim within a 24 hour period, the nurse should completely change her/his examination clothes and the exams should be completed in different examination rooms if possible.

A law enforcement officer must be present during the suspect examination for purposes of security, documentation and evidence chain of custody.

Process:

1. When a suspect presents to a hospital and does not request an evaluation or treatment of a medical condition, a medical screening examination is NOT required pursuant to the Emergency Medical Treatment and Active Labor Act. Examiners should adhere to hospital policies and procedures regarding the registration and assessment of emergency department patients. When presenting to
the Emergency Department for evidence collection, the suspect must be registered in order to generate a medical record so that the RN can document their interventions. The SANE may ONLY collect all that is stipulated in the search warrant. (http://www.cms.gov/Regulations-and-Guidance/Legislation/EMTALA/index.html?redirect=/emtala/)

2. The following outlines the suspect evidence collection procedures:

• The suspect is evaluated and registered according to hospital protocol.

• In cases involving a search warrant, review the search warrant and ascertain what items have been authorized for collection. Only the evidence specified on the search warrant will be collected. The examiner should note any items of possible evidentiary value found on the suspect but not listed on the warrant.

If additional evidence is discovered, examiners should discretely inform the officer so that he/she can contact the judge and request a verbal amendment to the warrant to allow the collection of that evidence. Please make sure that any conversation is NOT done in the suspect’s presence and do not collect the evidence without the court’s permission. Proper steps should be taken by the SANE and the officer not to leave the suspect alone in the exam room to hold this conversation out of regard for possible evidence tampering or contamination and for security reasons.

• A medical history is obtained, a physical evaluation is completed and all information is documented.

• Evidence is collected using hospital medical supplies. DO NOT USE the State of New Hampshire Sexual Assault Evidence Collection Kit.

• Chain of custody is maintained.

• Evidence is released to the investigating law enforcement agency.

3. The New Hampshire Victims’ Compensation Program will not be responsible for payment of the suspect examination.

4. The examiner should document any findings or observations made during the evidence collection process on the Forensic Evaluation Suspect Form and on the Male/ Female Body Diagram. Documentation should also include the demeanor of the suspect, any statements made by the suspect during the examination, the suspect’s appearance, physical anomalies, tattoos, piercings, specific suspect odors, indicators of force or injury and any other characteristics.
AUTHORIZATION TO EVALUATE SUSPECT  
FOR EVIDENCE COLLECTION BY CONSENT

Informed Consent (This form does not need to be used if there is a search warrant in place).

1. I understand that an examination for evidence can, with my consent, be conducted by an examiner to discover, identify and preserve evidence of a crime.

2. I understand that the forensic evaluation may include history gathering, a physical assessment and evidence collection.

3. Information concerning the examination will be released to the investigating law enforcement agencies.

4. Photographs and video may also be obtained. Like all evidence collected during the examination, this evidence will be used for legal purposes.

Authorization to Collect Evidence:

I give my permission for a forensic examination of my person. I certify that I have read, understand, and agree to the conditions described above.

This written permission is being given by me freely, voluntarily and without threats or promises expressed or implied of any kind.

___________________________  __________________________ ____________  
Suspect Signature                            Witness                                         Date

Authorization to photograph:

I understand the collection of evidence may include photographs and/or video and these may include the genital area. Knowing this, I consent to having photographs and/or video taken.

This written permission is being given by me freely, voluntarily and without threats or promises expressed or implied of any kind.

APPENDIX S:
SEXUAL ASSAULT EVIDENCE ANALYSIS FREQUENTLY ASKED QUESTIONS

- **What happens to the evidence collection kit and my clothing after I leave the hospital or clinic?**
  The police will be notified and they will take custody of the evidence collection kit and any clothing collected by hospital personnel. The evidence will then be transported to the State Police Forensic Laboratory for analysis.

- **How long will it take for the Forensic Laboratory to test the evidence collection kit or my clothing?**
  The analysis of sexual assault evidence begins in the Serology Section of the Forensic Biology Unit. Serology Section personnel will examine the evidence for relevant biological materials like semen or saliva. Analyses from the backlog of evidence in the Serology Section range anywhere from as little as 1-2 weeks to as many as 6-9 months after the evidence is received. The actual testing of the evidence can take from as little as 1-2 days up to 2-3 weeks depending on the case.

- **What happens after the analyses in the Serology Section are completed?**
  At the conclusion of testing, a report is prepared and sent to the police department informing them of the lab’s findings and, if necessary, advising them that DNA analyses are pending. After serological testing, the evidence collection kit and any items of clothing are returned to the police department.
  In some instances, samples from the evidence collection kit and/or clothing are forwarded to the DNA Unit for DNA testing. The analysis of sexual assault evidence from the backlog of evidence in the DNA Section ranges from as little as 4-6 weeks to as many as 6-9 months. The actual DNA testing will take approximately 2 weeks depending on the number of specimens tested and various other factors. A second report is sent to the police department informing them of the results of the DNA analysis. The DNA samples are eventually returned to the police department.

- **Can I ever get any of my clothing back from the police?**
  Because your clothing has been collected as evidence in connection with a criminal investigation, items of clothing cannot generally be returned without the permission of the County Attorney. In some cases the clothing has been marked or samples of fabric have been removed from the clothing for forensic testing. This typically renders the clothing unsuitable for continued use.

- **How can I find out the results of the analysis of the evidence collection kit or clothing?**
  Information regarding the results of any forensic testing may be obtained only through the police department and/or the County Attorney’s office.

- **Can I contact the Forensic Laboratory directly for the results of the analysis of the evidence collection kit or clothing?**
  No. The policy of the State Police Forensic Laboratory is to release any case related information only to the police department and/or the County Attorney’s office.
• What happens to the urine sample that was collected from me during my exam?
Urine samples are customarily submitted to the State Police Forensic Laboratory along with the evidence collection kit and any items of clothing. At the conclusion of the analysis of the contents of the evidence collection kit and any clothing, the forensic lab will contact the police to determine if an analysis of the urine for the presence of alcohol or drugs is appropriate. When urine samples are tested, the forensic lab will forward the toxicology report to the police department. Information regarding the results of toxicological testing may be obtained only through the police department and/or the County Attorney’s office.

• What happens to the evidence collection kit and my clothing if I report the crime anonymously?
Evidence collection kits collected from victims of sexual assault who initially choose to report the crime anonymously are also submitted to the New Hampshire State Police Forensic Laboratory. Once received, anonymous evidence collection kits are stored at the forensic laboratory for 60 days from the date of the sexual assault examination. Should you decide to report the crime to the police within that 60 days, you will have to provide the evidence collection kit serial number to the police so that the police can notify the forensic laboratory that a particular evidence collection kit already in their possession is now associated with a reported crime. Once notified, forensic laboratory personnel will then begin to analyze the contents of the evidence collection kit and/or any clothing.

The evidence collection kit serial number should be recorded on the Patient Information Form (Step 14) given to you at the end of your hospital examination. If not, please contact the medical records department of the hospital where you were treated to obtain this information. In some cases the police may be able to determine which evidence collection kit was collected during your exam based upon the date of the examination, the name of the nurse or doctor who treated you or the name of the hospital where you were treated.

After 60 days, anonymous evidence collection kits are returned unopened to the police department. Depending on the police department and its ability to store evidence long term, the anonymous evidence collection kits will be stored for some period of time beyond the initial 60 days. However evidence may not be kept indefinitely.

• What happens to the evidence collection kit and my clothing if I decide to report the crime to the police after 60 days?
Victims of sexual assault are always encouraged to report the crime to the police as soon as possible. Should you decide to report the crime to the police beyond 60 days, the police may have placed the evidence collection kit and any clothing in storage. Once you provide the police with the evidence collection kit serial number, the police are now able to associate you with a particular evidence collection kit and any clothing taken from you during your sexual assault examination. The police may submit the previously anonymous evidence collection kit and clothing to the forensic laboratory for testing whenever necessary. If stored properly, the evidence collected from you will not be significantly affected by the mere passage of time.

Strangulation Evaluation Tool

Method/Manner of Strangulation:
☐ One hand  Estimated length of time: ___________ seconds ___________ minutes
☐ Two hands  Estimated length of time: ___________ seconds ___________ minutes
☐ "Chokehold" Estimated length of time: ___________ seconds ___________ minutes
☐ Approached from the front
☐ Approached from behind
☐ Multiple strangulation attempts during incident (how many) _____________________________
☐ Jewelry on patient’s neck during strangulation
☐ Jewelry on suspect’s hands/wrist during strangulation
☐ Ligature used (describe if possible) ___________________________________________________
☐ Smothering attempt (describe) _____________________________________________________
☐ Other (describe) __________________________________________________________________

During strangulation did the patient note any of the following:
☐ Loss of consciousness/blacking out/passing out ___________ Number of times
☐ Incontinence of Urine          ☐ Incontinence of Stool
☐ Bleeding (describe) ______________________________________________________________
☐ Patient’s feet were lifted off the ground
☐ She was smothered in addition to strangled (with what) ________________________________

Since the strangulation, has the patient noted any of the following symptoms:
☐ Coughing          ☐ Drooling          ☐ Dyspnea
☐ Dysphagia          ☐ Odynophagia       ☐ Headache
☐ Lightheadedness    ☐ Neck Pain         ☐ Neck swelling
☐ Nose Pain          ☐ Nausea           ☐ Vomiting
☐ Sore throat        ☐ Crepitus/Subcutaneous emphysema
☐ Uncontrolled shaking ☐ Combativeness/irritability/restlessness
☐ Voice changes (describe) __________________________________________________________
☐ Vision changes (describe) _________________________________________________________
☐ Loss of memory (describe) _________________________________________________________
☐ Bleeding (describe) ______________________________________________________________
☐ Weakness/numbness of extremities (describe) __________________________________________

Post-Strangulation
Treatment and Follow-up Care
Instructions

You were examined and treated for strangulation-related injuries today by
__________________________________, an ER physician and
__________________________________, a Sexual Assault Nurse Examiner.

The police officer/department responding was ______________________________, and your case number
is ______________________ .

The crisis center advocate who responded was ________________________.

Strangulation is a form of asphyxia (lack of oxygen) caused by closure of the blood vessels and air passages of
the neck as a result of external pressure on the neck, and is a life-threatening event.

Sometimes associated health complications are seen immediately following a strangulation event, but they
can also develop a few days after the event.

Concerning Signs & Symptoms 72 hours post strangulation. If any of these symptoms occur, please
return to the emergency department. If any of these symptoms occur, please
return to the emergency department.

• Increasing/severe headache pain
• Increasing neck pain
• Drooping eyelid
• Difficulty speaking or understanding speech
• Difficulty walking
• Difficulty breathing
• Dizziness or lightheadedness
• Numbness, paralysis, or weakness, usually on one side of the body
• Seizure
• Sudden confusion
• Sudden decrease in the level of consciousness
• Sudden loss of balance or coordination
• Sudden vision problems (e.g., blurry vision, blindness in one eye)
• Vomiting
• Vaginal bleeding (if you are pregnant)
• Thoughts of suicide

If you are being seen immediately following the strangulation event, some of your injuries may not yet be
apparent. If any of the following develop or get worse in the next three days, please return to have a
follow-up examination:

• Pinpoint red or purple dots on your face or neck
• Bruises on your face, neck or body
• Burst blood vessels in your eye
• Swelling of your face or neck
**Follow Up Recommendations**

___ Please return to the SANE program on_____________ for a follow-up examination.

___ Please follow-up with your local crisis center to clarify your options and formal safety planning.

___ If you have questions or concerns regarding your legal case, please contact the police department and officer involved.

**If You are Pregnant**

If you are pregnant at the time of your strangulation, it is important that you report any of the following signs or symptoms to your doctor, and let him/her know that you experienced a strangulation event:

- Decreased movement of the baby
- Vaginal spotting or bleeding
- Abdominal pain
- Contractions

Please know that we are always here for you. If you experience further abuse, you should return to the E.D. for evaluation.
