

## 7/18/2022 RSAT RFP Q&A Summary

- Introduction
- Basic 10-minute PowerPoint presented by the NH DOJ Grants Management Unit.

### Questions asked

- **How much RSAT funding can we apply for?**

In the RSAT RFP posted on 7/11/2022, applicants can apply for up to \$235,224.92, however, if there are other eligible applicants that apply for funding, it may be adjusted to support their programming initiatives as well. In such a case, available funding will be reduced.

Additional considerations may include community priority needs. For example, if a particular jurisdiction is experiencing higher rates of drug overdose in comparison to others, this would likely be a community priority need that would need to be considered when approving and allocating RSAT funding.

- **If residents are found to have abused/distributed MAT prescriptions (Suboxone) while in the treatment program, and it is recommended to transition their treatment to a type of MAT by the treatment provider that happens to be more expensive, can RSAT funding be used to supplement our MAT budget to cover the extra associated costs?**

*Yes, RSAT funding can be used to supplement additional MAT costs. This would include the costs to administer MAT treatment. RSAT funding cannot be used to replace (supplant) what has already been budgeted for MAT expenses and that MAT be prescribed and administered in accordance with evidence-based treatment.*
