⁸Methamphetamine and cocaine with or without other drugs excluding fentanyl

⁹Other opioids with or without other drugs excluding fentanyl, methamphetamine, and cocaine

¹⁰Non-opioids excluding fentanyl, methamphetamine, cocaine, and all other opioids

'Drug Category' refers to the drug(s) that caused death, not necessarily all drugs detected by toxicology testing..

'Pending Toxicology' means that the death may be due to drug intoxication based on circumstances, scene investigation and/or autopsy findings but the final determination also depends on the results of toxicology testing. It can take up to 2 to 3 months to finalize the death certificate following a suspected drug intoxication death. This delay reflects the time required for specimen processing, toxicology testing and reporting and interpretation of the report by the pathologist.

The OCME makes every effort to ensure the accuracy of published data. However, case management software requires manual data entry and transcription errors may occur.
