September 2, 2004

Michael P. Nolin, Commissioner
Department of Environmental Services
29 Hazen Drive
Concord, New Hampshire 03301

Dear Commissioner Nolin:

This responds to your request for clarification of several issues involving the interaction between the Shoreland Protection Act and other state and municipal regulatory programs. Specifically, you inquired about the obligations of the Department of Environmental Services ("DES") under the Act when issuing other environmental permits, and the circumstances under which a local shoreland ordinance, rather than the Act, applies to a particular project.

I. THE SHORELAND PROTECTION ACT REQUIRES THE DEPARTMENT OF ENVIRONMENTAL SERVICES, IN PERMITTING A PROJECT WITHIN THE PROTECTED SHORELAND THAT FALLS UNDER SEPARATE PERMIT JURISDICTION OF THE AGENCY, ALSO TO ASSESS WHETHER THE APPLICANT'S PROPOSAL MEETS THE MINIMUM SHORELAND PROTECTION DEVELOPMENT STANDARDS.

The Comprehensive Shoreland Protection Act, RSA Chapter 483-B ("the Act"), originally enacted in 1991, functions statewide as an additional layer of regulation which overlays existing state and municipal permitting schemes, such as building permits, wetlands permits, and septic system approvals. 1991 N.H. Laws 303:1. Aimed at protecting the state’s public waters and preventing “uncoordinated, unplanned and piecemeal development along the state’s shorelines,” the Act establishes generally applicable minimum standards for development within the protected shoreland. RSA 483-B:1 (Purpose); RSA 483-B:9 (Minimum Standards).¹ In keeping with its “comprehensive” nature, the Act applies to all state and local permitting decisions which might affect the development of waterfront property. RSA 483-B:3, I ("State and local permits for work within the protected shorelands

¹ The Act applies to land within 250 feet of the “reference line” or high water mark. RSA 483-B:4, XV (definition of "protected shoreland"), XVII (definition of "reference line").
shall be issued only when consistent with the policies of this chapter”). DES has authority to
enforce the Act, as do municipalities in which protected shoreland is situated. RSA 483-B:5
(DES); RSA 483-B:8, III (municipalities).

The Act does not contain its own separate permit requirement. Rather, its standards
are designed to “piggy-back” on existing state and local permit proceedings. RSA 483-B:3, I
& II; RSA 483-B:6; RSA 483-B:14 (rehearings and appeals). Section 6 of the Act defines
the DES role in issuing permits for work within the protected shoreland:

I. Within the protected shoreland, any person intending to:
(a) Engage in any earth excavation activity shall obtain all necessary local
approvals in compliance with RSA 155-E.
(b) Construct a water-dependent structure, alter the bank, or construct or
replenish a beach shall obtain approval and all necessary permits pursuant to
RSA 482-A.
(c) Install a septic system as described in RSA 483-B:9, V(b)(1)-(3) shall
obtain all permits pursuant to RSA 485-A:29.
(d) Conduct an activity resulting in a contiguous disturbed area exceeding
50,000 square feet shall obtain a permit pursuant to RSA 485-A:17.
(e) Subdivide land as described in RSA 483-B:9, V(d) and (e) shall obtain
approval pursuant to RSA 485-A:29.

II. In applying for these approvals and permits, such persons shall
demonstrate to the satisfaction of the department that the proposal meets or
exceeds the development standards of this chapter. The department shall grant,
deny, or attach reasonable conditions to a permit listed in subparagraphs I(a)-(e), to protect the public waters or the public health, safety or welfare. Such
conditions shall be related to the purposes of this chapter.

RSA 483-B:6 (Supp. 2003). In programs that predate the Act, DES has regulatory authority
over the permits listed in RSA 483-B:6, I(b) – (e). RSA 482-A:3 (wetlands permit); RSA
485-A:17 (terrain alteration); RSA 485-A:29 (septic system and subdivision approval).

The well-established principles of statutory interpretation hold that statutes must be
interpreted based on their plain language, focusing on the statute as a whole, not on isolated
When the language used in a statute is clear and unambiguous, there is no need to examine
the provision’s legislative history. Merrill v. Great Bay Disposal Serv., 125 N.H. 540, 542

2 As originally enacted, the Act required that “[e]ach person intending to construct a new or expanded structure
within the protected shoreland, ... or any other activity which will alter the existing character of the protected
shoreland, shall seek a shoreland development permit” from DES. 1991 N.H. Laws 303:1; RSA 483-B:6 (1992
Bound Volume). However, in 1992 the permit requirement was eliminated, and section 6 of the Act was adopted in

Under the plain language of the Act, when an application for a DES permit triggers shoreland review under section 6, DES must proceed with its ordinary permitting process, but must also consider whether the proposal meets the minimum shoreland standards. These standards, contained in RSA 483-B:9, require (among other things) that primary structures be set back behind the primary building line, prohibit certain activities and substances within the protected shoreland, and establish specific requirements with respect to maintenance of a natural woodland buffer, septic systems, and prevention of erosion and siltation. If DES is not satisfied that the proposal meets the minimum standards of the Act, the agency must deny the application. RSA 483-B:6, II.

After careful review, we conclude that the agency’s current practice should be modified so as to better comply with the Act. Prior to issuing a permit, DES must be satisfied that the proposal meets the Act’s minimum standards. RSA 483-B:6, II. Currently, DES has no formal mechanism for reviewing plans for a proposal’s shoreland impacts, taken separately from the standard permit requirements under other regulatory statutes. The shoreland rules require applicants for the permits listed in RSA 483-B:6, I to certify that their projects meet the minimum shoreland standards. N.H. Code of Admin. Rules, PART Env-Ws 1409. Consistent with this rule, the DES practice has been to rely on a combination of the applicant’s certification and a permit condition requiring compliance with the Act.

Relying on the applicant’s certification and the prospect of enforcement action for noncompliance is not sufficient to demonstrate “satisfaction.” Instead, when issuing an environmental permit for a project located within the protected shoreland, DES must make affirmative findings showing the proposal’s consistency with the minimum standards of the Act. To provide a basis for these findings, the staff must request that the applicant provide information sufficient to demonstrate that the minimum standards are satisfied. Then, in issuing or denying the permit, the agency must make findings to support its conclusion, and condition the permit on compliance with any plans, specifications or techniques necessary to ensure that the project conforms with the minimum standards.

For example, the DES wetlands program might receive an application under RSA 482-A:3 for a boathouse from a property owner who also intends as part of the same

---

3 RSA 483-B:9, II(b).
4 The Act prohibits salt storage yards, automobile junk yards and solid or hazardous waste facilities, as well as the use of fertilizer within 25 feet of the reference line. RSA 483-B:9, II(a) and (d).
5 RSA 483-B:9, V(a).
6 RSA 483-B:9, V(b).
7 RSA 483-B:9, V(c). In addition, the Act contains other minimum standards concerning lot size, public utilities, and existing waste facilities. RSA 483-B:9, V(d-f).
“project” to construct or modify other structures within the protected shoreland.\textsuperscript{8} Under these circumstances, DES should review not only the boathouse plans, but also the plans for the other aspects of the project. To ensure that DES receives the necessary information from the applicant, I recommend that the standard application forms be modified to include a question about whether additional work in the protected shoreland is planned as part of the same project. For applicants who answer in the affirmative, there should be an additional form in which they must provide details about those aspects of the project. The application should not be considered complete until the applicant has provided this information.\textsuperscript{9} Some projects may require multiple DES permits (for example, both wetlands and site specific). For such projects, there should be internal coordination within the agency to ensure that the shoreland review is only performed once, and is incorporated into each permit issued.

You also asked about the appropriate appeal route for DES permitting decisions under section 6 of the Act. The Act specifically addresses this issue:

\begin{quote}
Where the requirements of this chapter amend the existing statutory authority of the department or other agencies relative to certain established regulatory programs and shall be enforced under these established regulatory programs, the existing procedures governing contested cases and hearings and appeals regarding these requirements shall apply. Where requirements of this chapter are new and do not amend existing statutory authority relative to any established regulatory programs, the procedures set forth in RSA 541-A:31 for contested cases shall apply.
\end{quote}

RSA 483-B:14 (emphasis added). Thus, any administrative appeal of a permitting decision is governed by the procedure specified in the statute under which the underlying permit was granted. See generally RSA 21-O:14, governing administrative appeals from DES decisions. For wetlands permits, appeal should be to the Wetlands Council (see RSA 482-A:10 and RSA 21-O:5-a); for subsurface and site specific permits, appeal should be to the Water Council (see RSA 21-O:7). Where the agency is undertaking enforcement action under the Act itself, appeal would be to the Water Council for administrative orders, and to the New Hampshire Supreme Court under RSA ch. 541 for administrative fines. RSA 21-O:7, IV; RSA 483-B:5, V (administrative orders); RSA 483-B:18, III(c)(administrative fines).

\textsuperscript{8}The Act says “proposal,” not “project.” RSA 483-B:6, II. However, given the subject matter and broad applicability of the Act, we conclude that the word “proposal” as used in RSA 483-B:6, II should be read broadly to include all work contemplated by the applicant as an integrated project on the property within the protected shoreland at the time the application for the DES permit is submitted. A narrower reading would confine the DES review to the criteria in effect prior to the Act, and undermine the Act’s purpose.

\textsuperscript{9}This is important for programs with statutory deadlines for acting on complete applications. See, e.g., RSA 482-A:3, XIV (Supp. 2003)(DES must complete review of wetlands application within set number of days of notice of administrative completeness, or application will be deemed granted).
II. A MUNICIPAL ORDINANCE CAN APPLY INSTEAD OF THE SHORELAND PROTECTION ACT ONLY AFTER THE OFFICE OF ENERGY AND PLANNING HAS CERTIFIED TO THE DEPARTMENT OF ENVIRONMENTAL SERVICES THAT THE LOCAL ORDINANCE IS AT LEAST AS STRINGENT AS THE ACT.

Your second question concerns the circumstances under which a municipal shoreland ordinance applies instead of the standards in the Act. We conclude that a municipal ordinance can render the Act wholly inapplicable, but only when that ordinance has been certified by the Office of Energy and Planning ("OEP") as being equally stringent to the Act. However, with respect to primary building setbacks only, a setback less than fifty feet may apply in a municipality that adopted the setback prior to January 1, 2002.

Shoreland property is exempt from the Act if it is located in a municipality whose local shoreland ordinance has been certified by OEP. Specifically, the Act provides as follows:

I. Subject to paragraph II, the provisions of this chapter shall not apply to any applicant whose land is in a municipality that has adopted a shoreland protection ordinance under RSA 674:16, the provisions of which are at least as stringent as similar provisions in this chapter. The director of the office of energy and planning shall certify to the commissioner that the provisions of a local ordinance are at least as stringent as similar provisions in this chapter.

II. If a municipality has a local ordinance that does not contain a counterpart to all of the provisions of this chapter, the more stringent provisions shall apply.

RSA 483-B:19 (Supp. 2003 and 2004 N.H. Laws 257:44). While paragraph II was added in 2002,\(^9\) the requirement of OEP certification has remained unchanged since the Act took effect in 1994.\(^10\)

In order for a municipality to qualify for the exemption, the plain language of section 19 requires not only that the local ordinance be as strict as the Act, but also that OEP so certify to DES. If the exemption could take effect without OEP certification, the language requiring certification would be impossibly superfluous. Merrill v. Great Bay Disposal

\(^10\) The original 1991 version of the law provided that the Act would not apply in any municipality that had adopted a draft model ordinance provided by the office of state planning, the predecessor to OEP. See 1991 N.H. Laws 303:1; RSA 483-B:19 (1992 Bound Volume). However, the certification requirement, in substantially its current form, was substituted prior to the law taking effect in 1994. RSA 483-B:19 (2001 Bound Volume); 1994 N.H. Laws 383:20. The provision has also been amended several times, most recently in 2004, to reflect changes in the name of the agency performing the certification. 2003 N.H. Laws 319:9; 2004 N.H. Laws 257:44.
Serv., 125 N.H. 540, 543 (1984)(all words of statute must be given effect; legislature not presumed to use superfluous words). Requiring an affirmative certification by OEP is also consistent with the clear legislative intent that the Act be comprehensive in its application, and that its standards apply to all state and local permits. See RSA 483-B:3 (requiring all state and local permits to be consistent with the Act).

The primary building setback is the only provision of the Act which may vary among municipalities, without OEP certification. Prior to a 2002 amendment, a municipality could establish its own primary building setback, whether lesser or greater than the figure of fifty feet established under the Act. RSA 483-B:9, II (2001 Bound Volume). Under an amendment to the Act which took effect on July 2, 2002, the primary building line is established absolutely at “50 feet from the reference line.” 2002 N.H. Laws 114:1; RSA 483-B:9, II (Supp. 2003). Nevertheless, the general court expressly allowed municipalities which had, prior to January 1, 2002, established a setback of less than fifty feet, to maintain that different setback. 2002 N.H. Laws 114:1. Thus, while an uncertified ordinance cannot supplant the Act, certain municipalities whose ordinances have not been certified by OEP may nevertheless have a primary building setback which varies from that established under the Act. Even in those municipalities with different setbacks, however, all other provisions of the Act apply.

In sum, the standards of the Act apply to all state and local permitting decisions, unless the local ordinance has been properly certified by OEP. Both the state and municipalities have authority to enforce the Act; it is worth noting that violations include not only construction that fails to conform with the minimum standards, but also issuance of a permit that is not consistent with the policies of the Act. RSA 483-B:3, I.

I trust this responds to your inquiry. Given the previous uncertainty on the interpretation of these provisions, both within the agency and in the community at large, I recommend that DES undertake outreach consistent with this opinion to ensure affected entities are aware of the Act’s requirements.

Very truly yours,

Jennifer J. Patterson
Senior Assistant Attorney General
Environmental Protection Bureau
